## Consolidate tab is not available on the Lasernet Parameters menu

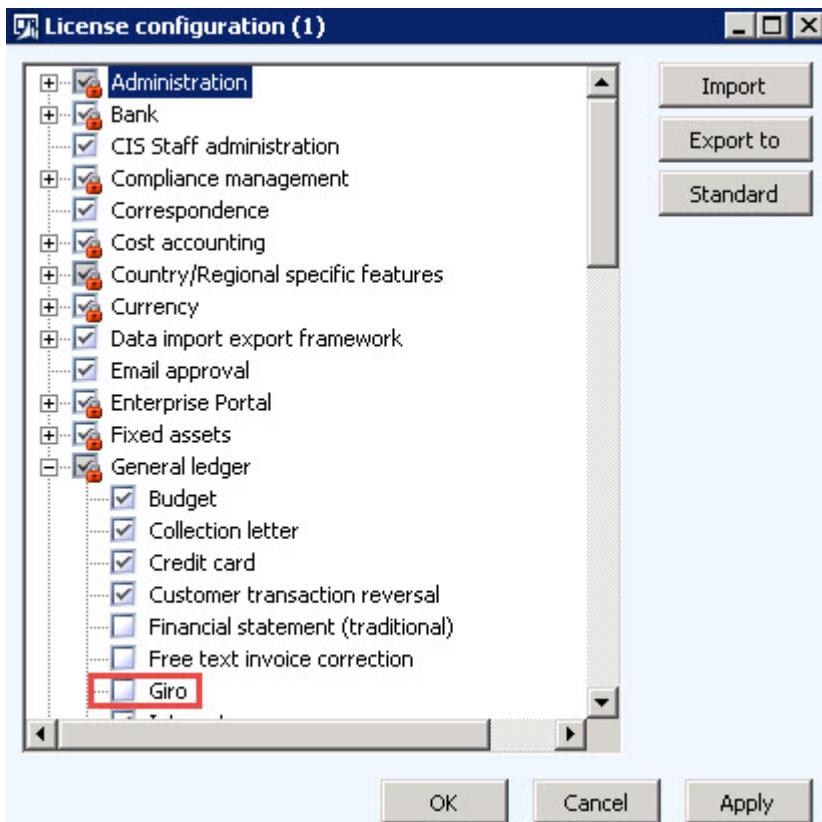

- 2023-12-06 - Comments (0) - AX 2012 FAQs

When trying to access the Consolidate tab within the **Lasernet > Setup > Parameters**, the tab might appear missing.

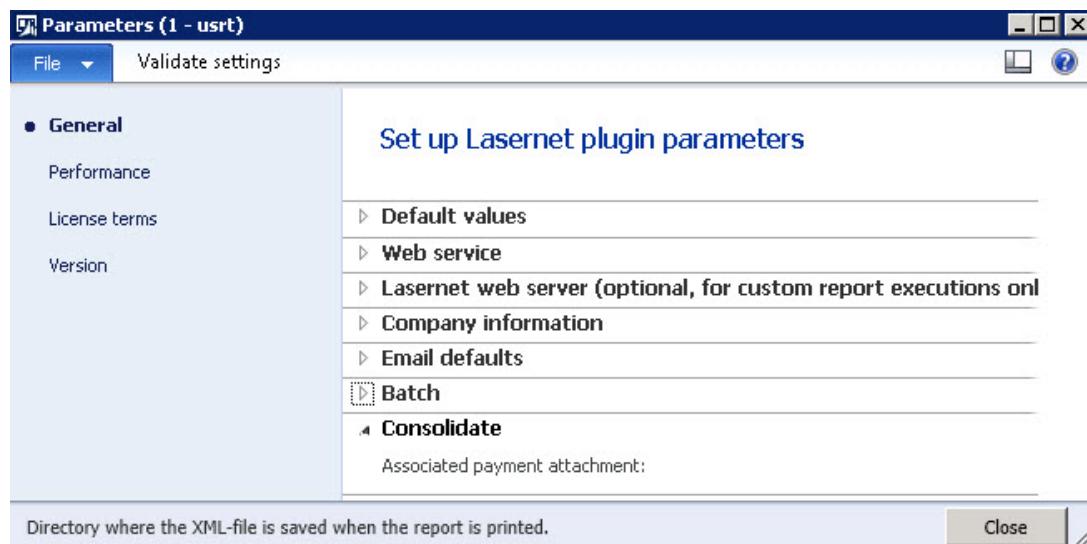

This occurs because Consolidate will only show up if the AX company is defined to use Giro as payment within License Configuration.

## Resolution

1. Navigate to **System administration > Setup > Licensing > License configuration** and then **General ledger**.
2. Select **Giro** and then close the windows. It will then start to synchronize the database.

Consolidate is visible again.

This could happen to any menu within Lasernet, if there is a license key available.
