Document printing in Lasernet BC Connector

Lasernet for Dynamics 365

This article describes the print request page for documents and the Lasernet Print Archive function.

Document Printing

When the **Print** action is selected on documents in Dynamics 365 Business Central (for example, Order Confirmation on a Sales Order) defined for Lasernet integration, the Lasernet [document name] request page opens.

LASERNET ORDER CONFIRMATION

OK   Cancel

The **Lasernet Option** FastTab includes the field that determines what happens when the **OK** button is clicked. The options are:

- Preview – Dynamics 365 Business Central waits for Lasernet to generate the PDF and shows it on the user screen. This option requires Acrobat Reader or another PDF viewer.

- Save to PDF – Lasernet creates a PDF and returns it to the user PC, where Dynamics 365 Business Central opens a save file window in which the user can choose a name and a folder.

- Print – A Print Dialog opens, and a printer can be selected. The printer name is written in the XML file for Lasernet and it is printed on the physical printer.

- Send E-Mail – Lasernet sends a document as an e-mail using the address specified in the **Lasernet E-Mail** field on the customer/vendor card. This option requires an additional mail server setup in the Lasernet software.

- E-Invoice – Generates a document in another format, such as XML. This option requires additional mapping/setup in Lasernet.

- Fax – Sends a document to the fax indicated in the **Lasernet Fax** field on the customer/vendor card. This option requires additional setup for integration to a fax solution, such as Microsoft Fax.

Note
The fields on the [Document Name] FastTab are used for filtering.
