

Tier Overview

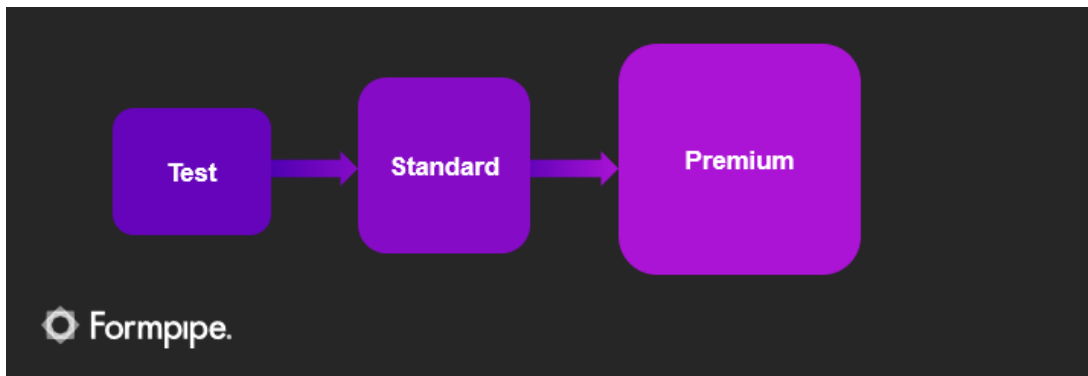

Usama Musthafa - 2023-01-23 - Comments (0) - Formpipe Cloud General Information

Formpipe.cloud

Note: These tiers are only for our D365 customers, for larger clients they will have bespoke packages suited for their needs.

Note: Due to regional differences the Standard tier is unavailable for US D365 customers.

We understand that one size fits all is not a suitable solution, so Formpipe.Cloud follows a "Good/Better/Best" approach, with more features included with each tier.

Test Tier Description

The Test tier is the most basic Formpipe.Cloud offering and is designed only for Test workloads.

Features:

- A single production node of Lasernet and/or Autoform DM
- Remote development tools
- Data Encryption

Standard Tier Description

The Standard tier is a level above the Test tier and includes a few additional features.

Features:

- Everything from the Test tier
- Geo Redundant Storage (GRS) is utilized to offer a global data centre level redundancy for data and services
- GRS allows the backup data to be replicated to another Azure region for additional redundancy

Premium Tier Description

The Premium tier is a level above the Standard tier and includes a few additional features.

The main benefits of the Premium tier is the addition of an extra node.

The Premium tier currently only supports Lasernet.

Features:

- Everything from the Standard tier
- Two nodes are provisioned in a highly available configuration for increased service redundancy
- Geo Redundant Storage (GRS) is utilised to offer a global data centre level of redundancy for data and services
- GRS allows the backup data to be replicated to another Azure region for additional redundancy
