

Alternate Rows (Other Properties)

Alex Pearce - 2024-03-18 - Comments (0) - Lasetnet Form Editor 9 - Designing Forms

Lasetnet

In this exercise, you can learn how to apply the **Alternating** tool to detect available pattern(s), so you can design a table in the output by highlighting odd and even rows (which are actually instance(s) of a pattern) by setting a background color and borders.

The **Alternating** option allows you to detect a pattern in one of the following ways:

- **Odd/Even** - to alternate all available instances belonging to a pattern as odd and even.
- **Odd/Even but not in the Same Pattern** - to alternate the current instance as odd and even but only if the previous one belongs to another pattern.
- **Same As Previous Pattern** - to keep instances without alternating.

Exercise

Download and import the attached configuration called **33. Alternate Rows (Odd and Even)** in **Lasetnet Developer 9**. Afterwards, go to the **Forms** section and open the **Sample** form.

1. In the input, select the **Body_CustInvoiceTrans** pattern, right-click the item, and then select **Properties** in the context menu that appears, or just double-click the item. As a result, the **Pattern Properties** dialog opens.

2. Switch to the **Alternating** tab. From the **Detect pattern** drop-down box, select **Odd/Even**.

Pattern Properties

Input Output

Detect pattern: Odd / Even

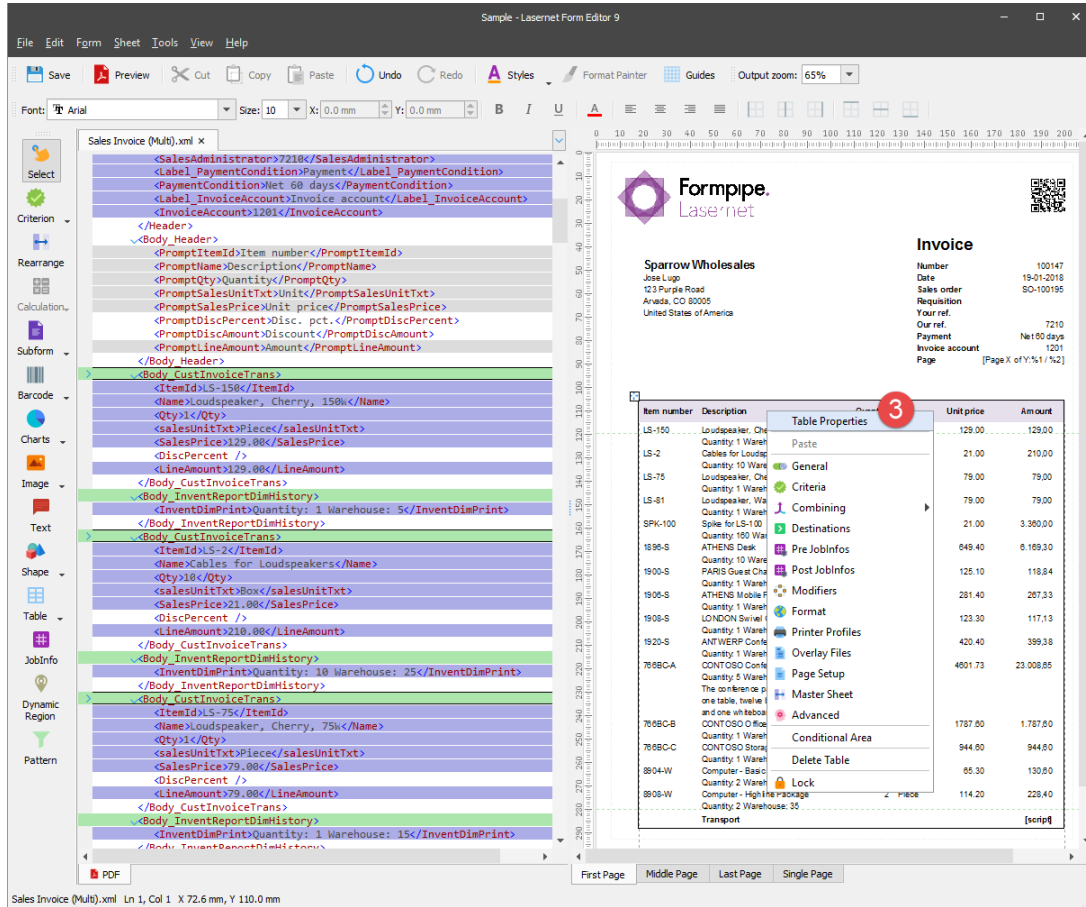

Odd / Even but not if the same Pattern

Same As Previous Pattern

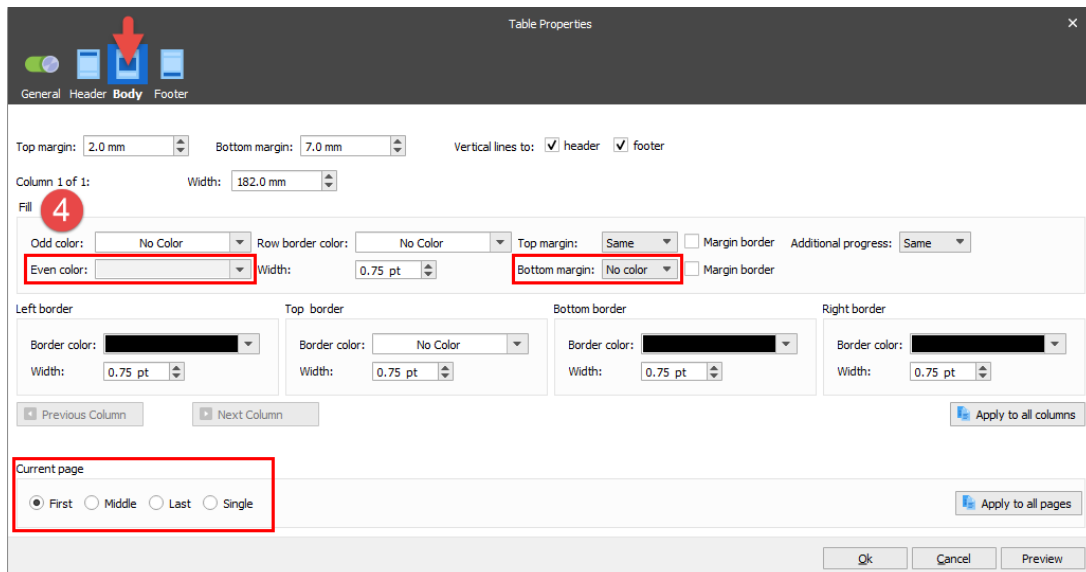

OK Cancel

Apply the same setting for the **Body_InventReportDimHistory** and **Body_CustInvoiceDescription** patterns.

3. In the output, open the **Table Properties** dialog on the **Body** tab.

4. To apply the **Alternating** option, use controls of the **Fill** group box. Start by selecting the **First** radio button in the **Current** page group box, and then select the grey color in the **Even color** drop-down box as well as select **No color** in the **Bottom margin** drop-down box. Leave the rest settings of the **Fill** group box unchanged.

Apply the same **Fill** settings for a middle page, and then for the last and single ones by selecting the required radio button in the **Current page** group box.

Note: You are proposed to specify the **Fill** settings for each page separately as the rest settings of the table body differ for each page. Otherwise, you can specify the **Fill** settings for the first page, for example, and then click the **Apply to all pages** button to apply settings to all pages, but then you need to change the **Top margin** value for the middle and last pages, as well as the **Bottom border** value for the last and single pages, to restore their initial values.

Once you are done, click the **OK** button.

Note: If you want to preview a table in the output with settings you have specified but not applying them, click the **Preview** button.

Below is a picture illustrating the table body with the applied settings.

The screenshot displays the LAMNET Form Editor interface. On the left, the XML code for a 'Sales Invoice (Mult)' is visible, containing multiple 'Body_InvoiceTrans' sections. Each section defines an item with attributes like 'Name', 'Qty', 'SalesPrice', and 'LineAmount'. The right side shows the rendered invoice, including a QR code, company logo, and a table of items.

Item number	Description	Quantity	Unit	Unit price	Amount
LS-150	Loudspeaker, Cherry, 150W Quantity: 1 Warehouse: 5	1	Piece	129.00	129.00
