CE connection forms script error

Alex Clemons - 2023-04-19 - Comments (0) - Lasernet CE Connector General Information

Note
Before undertaking the solution to this error, users must create, modify and deploy a new CE solution. If this is not something that you are comfortable with, please refer the task to your CE system admin.

Due to a change in the way that Microsoft manages the forms in CE, there will be some errors in the setup forms for the CE Connector.

When opening the following forms:

- Lasernet flyout/group

- Lasernet group/HTTP Method

- Lasernet group/OData Dialog

- Lasernet group/OData Direct Submit

- Lasernet group/Open URL

you may see the following error message:

This is due to the way the form is managing the default value for 'order'. There is a way to fix this error, which is to deploy a solution that updates the logic. Please follow the steps below:

Create a solution containing the modifications

1. Navigate to **Settings** and select **Advanced Settings** from the dropdown menu.

1. On the Settings page, under Customization, select **Solutions**.

1. On the All Solutions page, click **New** to create a new solution.

1. Add values to the following fields:

   - **Display Name and Name:** Give the solution a sensible name and display name- these can be the same.
   - **Publisher:** Select the appropriate publisher (we have used the default publisher for the organisation).
   - **Version:** Set version as '1'.

The Configuration page field can be left blank. Click **Save**.

Add the entities

1. Within the newly created solution, navigate to **Components** > **Entities** and then select **Add Existing**.

1. Add the following entities from the list:

   - Lasernet flyout/group

- Lasernet group/HTTP Method

- Lasernet group/OData Dialog

- Lasernet group/OData Direct Submit

- Lasernet group/Open URL

You can multi-select entities in the list; the entries in the screenshot above are examples only.

1. Once the entries from Step 2 have been added, click **OK**.

2. Clear the **Include entity metadata** checkbox and only select the 'Main' Formtype for each selected entity.

1. Click **Next** and then **Finish** once the last entity has been configured.

2. Select **No, do not include required components**. Your solution will now look like this:

Change the value on the form

1. Open the 'Main' form for the entity.

1. Click **Form Properties** in the ribbon.

1. Within Event Handlers, click **Edit** for the "Formpipe.Lasernet.DefaultValues.setDefaultValues"-function.

1. Change "lac_order", "1" to "lac_order", 1.

1. Click **OK** > **OK** and then **Save and Close**.

Publish

1. Click **Save** and then select **Publish** in the ribbon.

1. Repeat for each form mentioned in this article:

- Lasernet flyout/group

- Lasernet group/HTTP Method

- Lasernet group/OData Dialog

- Lasernet group/OData Direct Submit

- Lasernet group/Open URL
