

Clear out FailedJobs, temporary files and database

- 2023-10-25 - Comments (0) - Lاسernet General Information

Lاسernet

Note

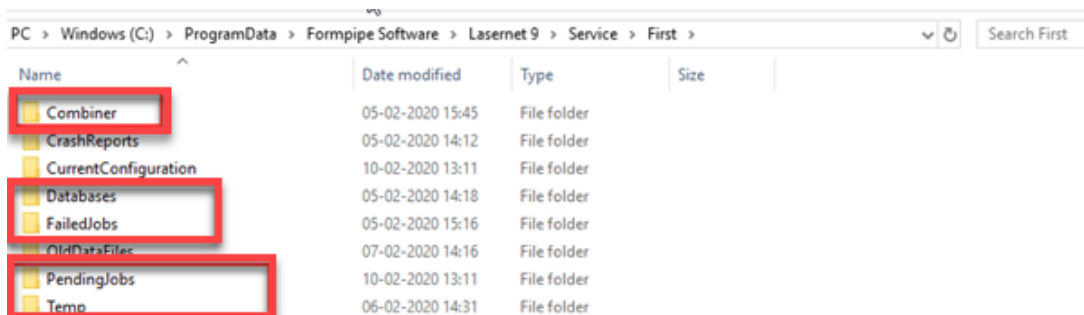

This article applies to Lاسernet 9. For Lاسernet 10, please refer to [Clear out FailedJobs, temporary files and database \(Lاسernet 10\)](#)

On occasion, there may be a need to clear Lاسernet database temporary files. The reasons can vary, but predominantly they are:

- There may be many FailedJobs slowing down the Lاسernet application.
- A Lاسernet job keeps running through stuck in a loop and persistently causes Lاسernet to crash.

Follow these steps to clean up your Lاسernet application:

1. Ensure Inputs are paused as you don't want to clear the database with jobs running through Lاسernet. Wait for the jobs to finish processing through Lاسernet (check the Lاسernet monitor).
2. Open **Services** and stop the Lاسernet service or end it via Task Manager.
3. Clear the folders marked in red boxes in the screenshot below and start the service again.

Programdata might not be visible as it is a hidden folder, in that case just type it in the search field.

The databases folder only holds information about FailedJobs, ScheduledJobs, PauseJobs,

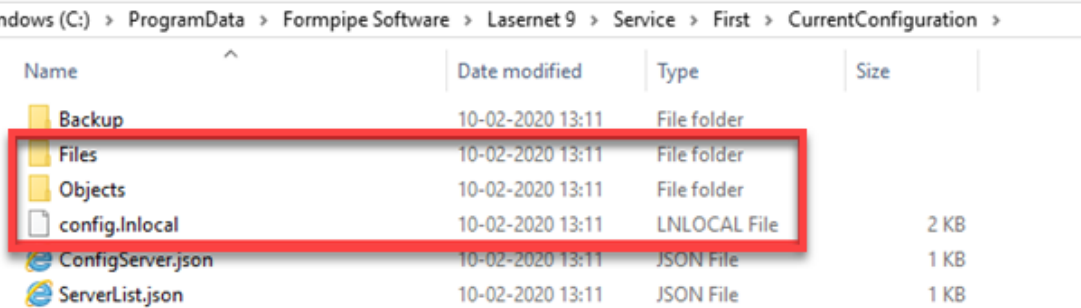

etc. There is nothing about the Lasernet configuration. If you use SQL Server as a database for running jobs, you will have to delete/rename the database yourself via your preferred SQL Tool.

4. Start the Service back and you should see the service database re-created.

5. Resume any inputs.

Clear the configuration

If the above hasn't solved the issue then you can clear the running configuration loaded to the service. In that case, open the CurrentConfiguration folder and delete the files and folders marked below:

Windows (C:) > ProgramData > Formpipe Software > Lasetnet 9 > Service > First > CurrentConfiguration >

Name	Date modified	Type	Size
Backup	10-02-2020 13:11	File folder	
Files	10-02-2020 13:11	File folder	
Objects	10-02-2020 13:11	File folder	
config.Inlocal	10-02-2020 13:11	LNLOCAL File	2 KB
ConfigServer.json	10-02-2020 13:11	JSON File	1 KB
ServerList.json	10-02-2020 13:11	JSON File	1 KB

Then Commit/Patch from the Developer to reload the configuration to the service.
