Docusign Configuration

- 2024-03-27 - Comments (0) - D365 FO Connector General Information

Lasernet for Dynamics 365

Lasernet is able to generate a PDF file that can be sent to a customer's Docusign portal for authorisation. The basic principle is that you define in Dynamics who should authorise the document which is to be sent as a Jobinfo to Lasernet which in turn sends the email address and the PDF file to the Docusign portal for processing.

A customer needs to have a Docusign account (this is not provided by Formpipe).

Steps

The following steps can be taken to ensure a PDF file is sent to a customer's Docusign portal for authorisation:

1. A Dynamics developer is needed to create a form where we can setup default employees on a vendor or customer or wherever you need it.

Here is a sample where we have added **Vendor Mapping** to the Vendor. On the vendor, you create a "default" setup of employees which can subsequently be retrieved from the Purchase order / "Employee mapping".

ł	→ C (https://tstmwi73pu15f	ca92800d5126bbfaos.cloudax.dy	namics.com/?cmp=US	MF8mi=VendTableListPage

		LTL Vendor	LTL Vendor	No				
		ONE	One-time vendor	No				

2. On the Purchase order form, add another form called *Employee Mapping*. Here you can view the default settings that you type in on the vendor form and override them if needed. We need an email address for all that need to sign the document.

Employee Mapping	?
Purchase order	
000039	
Load default → Add line Remove Personnel number Email 000001 jodi@contoso.com]

Changing an email address under "Employee Mapping" does not change the employee's email address.

3. Now that you have a form where you can see the email addresses, add those into the XML file that is sent to Lasernet. Do this via the **Query wizard** or **Structure** in Lasernet.

Lasernet configuration

There are some changes to the Lasernet build that are needed.

1. Add a new Output module by adding an **HTTP** module:

Now we have a module with a connection to Docusign. The next step is the add a new Base 64 Encode modifier if you do not already have one.

4. Go to **Modifiers** and add a **Base64** modifier. Name it **Base64 Encode** and make sure that you have selected **Base64 Encoder** in **Direction**.

Change your Lasernet Form

1. Navigate to your form on the report on which you need to sign with Docusign. In this example, we are using the Purchase order form.

2. Add a new sheet after the PDF sheet with **XML** as input and output and ensure you add Sheet criteria so only this sheet is executed when needed.

3. You need to import this template. You might have to create an XML file manually and insert this text:

CODE

```
<?xml version='1.0'?>
<s:Envelope xmlns:s="http://schemas.xmlsoap.org/soap/envelope/">
<s:Body xmlns:xsd="http://www.w3.org/2001/XMLSchema"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
<CreateAndSendEnvelope xmlns="http://www.docusign.net/API/3.0">
<Envelope>
<AccountId>76dclc5b-6fdc-425b-b50d-be89e38dc696</AccountId>
<Documents>
<Document>
<ID>1</ID>
<Name>Our Document</Name>
<PDFBytes>#PDFJobData#</PDFBytes>
</Document>
</Document>
</Document>
</Document>
```

```
<Recipient>
```

```
<ID>1</ID>
```

- <UserName>Torben Pedersen</UserName>
- <Email>torben.pedersen@formpipe.com</Email>
- <Type>Signer</Type>
- <AccessCode xsi:nil="true"/>
- </Recipient>
- </Recipients>
- <Tabs>
- <Tab>
- <DocumentID>1</DocumentID>
- <RecipientID>1</RecipientID>
- <PageNumber>1</PageNumber>
- <XPosition>200</XPosition>
- <YPosition>200</YPosition>
- <Type>SignHere</Type>
- </Tab>
- </Tabs>
- <Subject>Lasernet FTW</Subject>
- <EmailBlurb>Lasernet is here!</EmailBlurb>
- </Envelope>
- </CreateAndSendEnvelope>
- </s:Body>
- </s:Envelope>

4. Add the information you need from the XML file. Include the email addresses of the

persons that need to sign the document.
