Lasernet for Dynamics 365

After an upgrade to Dynamics 365 FO 10.0.11, there is a problem with the **Free text invoice**.

Microsoft has added a parameter for the "Suppress depreciation of payment section" and this gives the following error message:

Error

Lasernet report FreeTextInvoice.Report An attempt was made to set a report parameter 'SuppressDepreciationOfPaymentSection' that is not defined in this report.") and the invoice is not printed.

Fix the Report

When a change has been made on the SSRS report you need to fix the report to bring the change to the Lasetnet extension of the SSRS report. Fix the FreeTextInvoice SSRS report. To fix a report, follow the guidelines found in the Fix report section of the [Fix reports manual](#).
