## Lasernet for Dynamics 365

When deploying a software deployable package, the following error message may be displayed:

[2020-09-14 13:58:00Z] Error during AOS update: Unable to resolve dependency 'dynamicsax-lasernet'. [2020-09-14 13:58:00Z]

The error occurs because not all models that have dependency are included in the deployable package. The solution is to include all models.

## Check your model dependency

To check your model dependency, follow these steps:

- 1. Open Visual Studio > View > Explorer > Model view.
- 2. Right-click model and select **View package dependencies** > **View incoming references**.
