Error Message: “Server failed to authenticate the request. Make sure the value of Authorization header is formed correctly including the signature.”

Alex Clemons - 2021-12-06 - Comments (0) - Lasetnet Developer FAQs

Lasetnet

The following error indicates that there was an issue connecting to the Azure storage account:

Lasetnet monitor log:

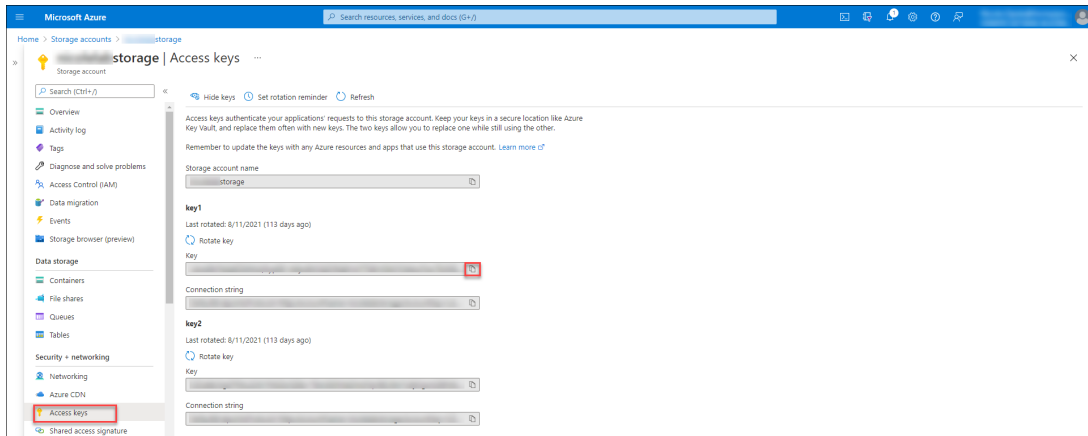

```
Server failed to authenticate the request. Make sure the value of Authorization header is formed correctly including the signature.
```

You may see this error in the Lasetnet Monitor log when trying to validate the Lasetnet server from the Lasetnet connector for Dynamics 365 F&O. This error may also appear when you select “Test connection” on the Azure storage connection within the Lasetnet Developer.

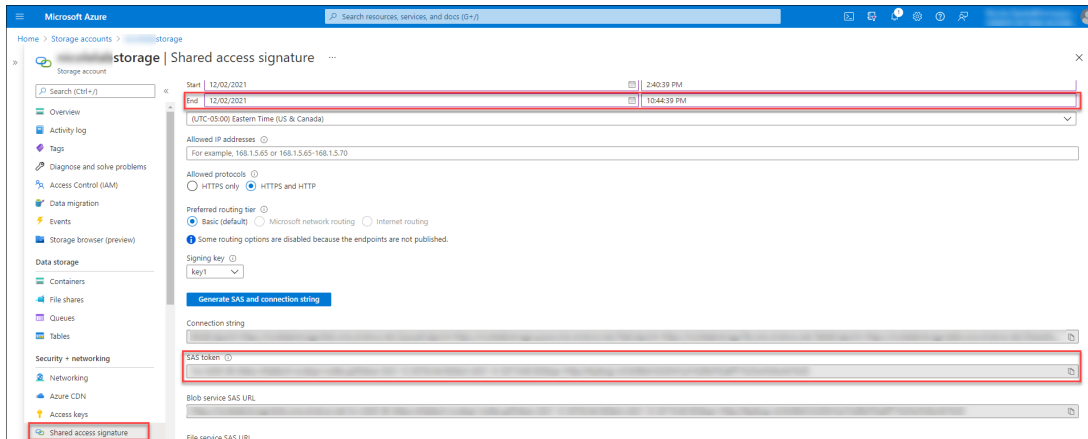

Solution

1. Navigate to **Lasetnet Developer > Commands** and double-click the Azure storage you are trying to use.
2. Identify what type of credentials you are using to connect to the Azure storage:

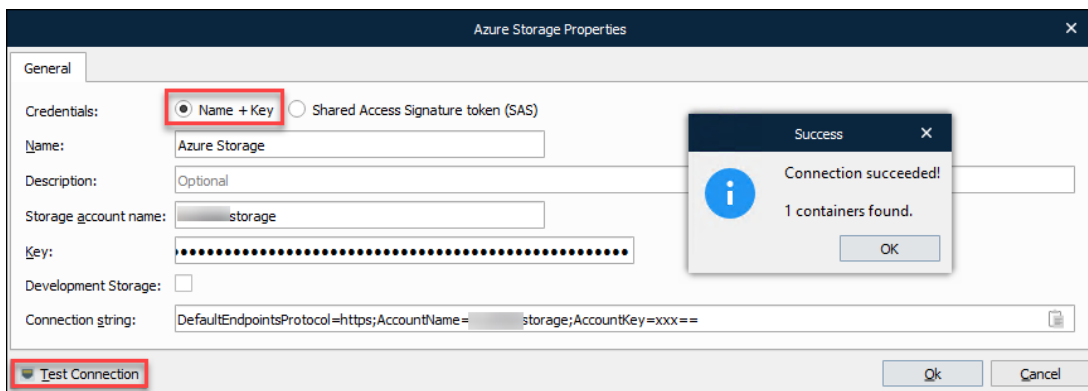

If you are using *Name + Key*, go to your Azure portal and find your storage account. The key may have been rotated. Copy the connection string.

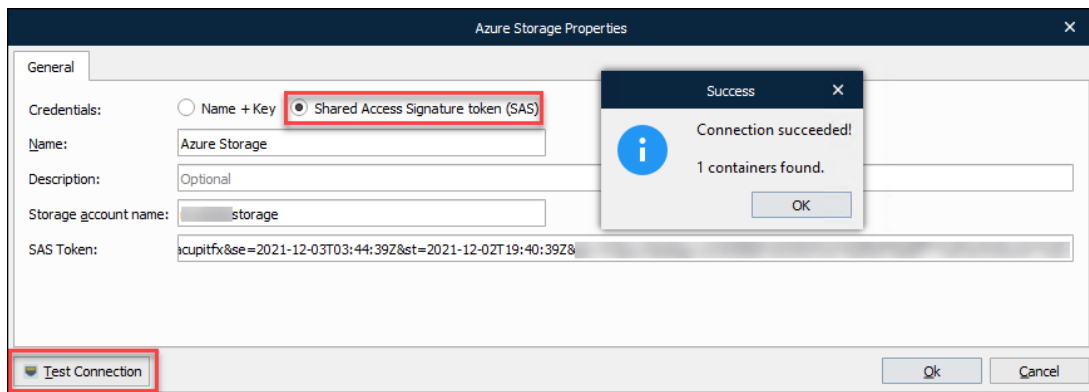

If you are using *Shared Access Signature token (SAS)*, go to your Azure portal, find the storage account, find the Shared Access Signature. Ensure the SAS has not expired and copy the SAS token.

If using *Name + Key*, paste the latest connection string into the Lasernet developer Azure Storage connection and test the connection.

Similarly, if you are using *SAS*, paste the SAS Token and test the connection.

For more information on how to create and manage access keys, please refer to the following article from Microsoft:
