Error Message: "The file type is incorrect. The import is canceled."

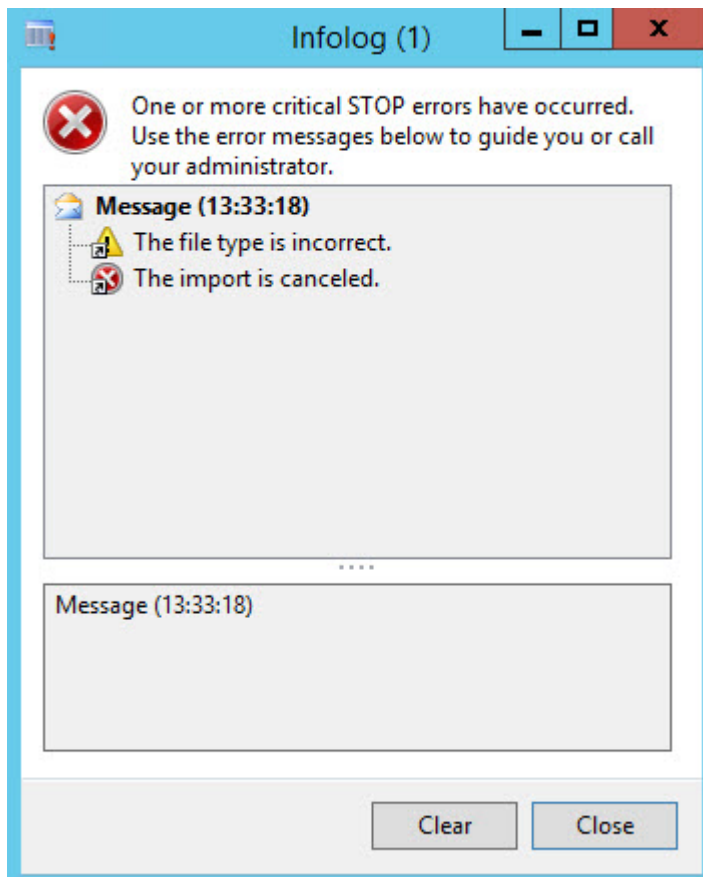

- 2022-10-14 - Comments (0) - AX 2012 FAQs

This article provides a solution for the following error message which may appear in AX 2012 when trying to import a configuration via the Lasernet Export / Import tool:

The file type is incorrect.

The import is canceled.

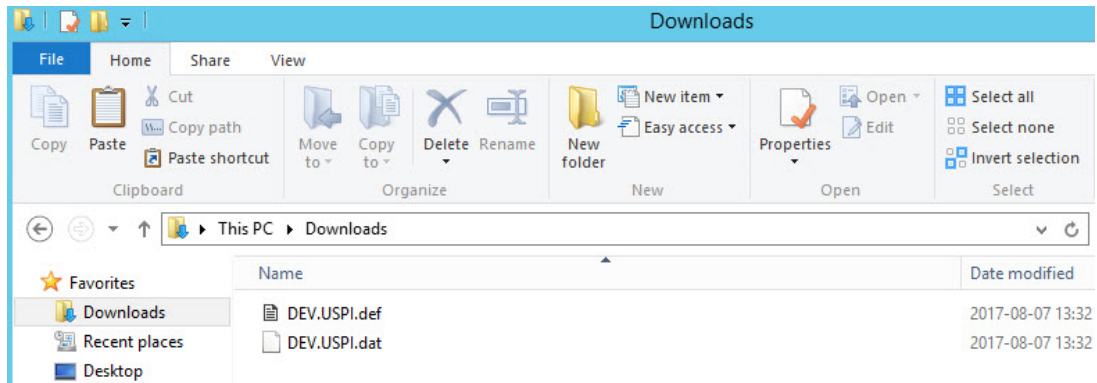

This error is triggered by incorrect formatting on the filename.

Resolution

Follow these steps to resolve the error:

1. Check your filename. AX does not allow the filename to have more than one period in the export filename.

Example of an incorrect filename: **DEV.USPI.dat**

2. Correct your export filename so it only has one period in the naming.

Example of a correct filename: **DEV_USPI.dat**
