

How can I put Autoform DM Client in/out of DEBUG logging mode?

Ross Glover - 2022-08-04 - Comments (0) - Autoform DM FAQs

Autoform DM

Logging is controlled in Autoform.Client.exe.config inside the Client install directory. Follow these steps to put Autoform DM Client into DEBUG logging mode:

1. Open the Client install directory mentioned above and locate the following tag:

Tag:

```
<log4net>
  <appender name="RollingFileAppender"
type="log4net.Appender.RollingFileAppender">
    <file value="{LOCALAPPDATA}\Formpipe
Software\AUTOFORMDM\Client\logs\
{USERNAME}-Client.log"/>
    <appendToFile value="true" />
    <rollingStyle value="Size" />
    <maxSizeRollBackups value="10" />
    <maximumFileSize value="10000KB" />
    <staticLogFileName value="true" />
    <layout type="log4net.Layout.PatternLayout">
      <conversionPattern value="%date : %thread %level
%logger - %message%newline" />
    </layout>
  </appender>
</root>
  <level value="DEBUG" />
  <appender-ref ref="RollingFileAppender" />
</root>
</log4net>
```

2. Change the file value to "DEBUG" and save the file.

3. Restart DM Client for these changes to take effect.
