

How do I Add an Additional Azure Service Bus for a Specific Report?

- 2023-11-30 - Comments (0) - Lasetnet FO Connector FAQs

Lasernet for Dynamics 365

This article will demonstrate how to add another Azure Service Bus for a specific report. Please follow these steps:

1. Create a new queue in Service Bus Explorer. In the example (FlemmingTest), Transport Type will be at the end of the string when selected:

2. Create a new **Azure Service Bus Input Port** in Lasernet Developer. In the example, we have duplicated the existing one, the new one is called 'Azure Service Bus - Copy'.

3. **Commit/Deploy** to make it available.

4. Create a new Connection in LAM. In the example, we have called the connection 'FlemmingTestID'.

5. Create a new server in Lasernetnet FO Connector with a reference to the new connection. In the example, the new server has the same name with `_b` appended to the end.

7. Ensure it is placed after the default server (at the top) and toggle the **Active** button to **Yes**.

8. On the report where you run the big batch, set up the new server as your choice. In the example, it is SalesConfirmReplacement to which the new server is attached. All the others have no server selection, so they will choose the default server.

The screenshot shows the 'Finance and Operations' interface. On the left, a table lists various reports. The report 'SalesConfirmReplacement' is selected and highlighted with a red box. On the right, the configuration pane for this report is visible. In the 'Parameters' section, the 'Server' dropdown menu is set to 'TS15LX1006PU30_0', which is also highlighted with a red box.

Origin	Report name	Report design name	Active
Query	ProductIdentifier	Custom query: ProdTable	<input checked="" type="checkbox"/>
Query	ProductIdentifierAssembly	Custom query: ProdTable	<input checked="" type="checkbox"/>
