

How do I Format the Email Subject and Body from Lasetnet Connector?

- 2023-11-30 - Comments (0) - Lasetnet FO Connector FAQs

Lasetnet for Dynamics 365

The purpose of this article is to provide a guide on how to use the Lasetnet connector to format an email subject and body which dynamically uses report information from Dynamics 365. This allows users to create generic email subjects and bodies that will dynamically populate relevant data. This process can be used in Destinations as well as default destinations. This article provides examples from a Report's default destinations setup but can be applied to Destinations if you wish to use Predefined destinations.

1. Navigate to **Lasetnet > Common > Reports** and select your report from the list.
2. On the right-hand side, scroll down to the Destination defaults fast tab (Destinations on the action pane for predefined destination setup) and on the Subject of the email, select the **ellipses** button.

3. Create a new record and select a **Language**. The Lasernet connector will dynamically select the correct translation of the Email subject and body which corresponds to the record being sent.

4. Type in your desired subject and body.

Overview

PARAMETERS

Subject: Sales Packing Slip

Dear,
Please find attached the sales packing slip for your sales order;

4. Click the **Values used in e-mail** section and select **Add**.

A dialog will pop-up. This dialog allows you to select tables and fields from the report itself. You can also use the dialog to add values through the expression editor, bring in parameter values, calculated fields, etc. Click **Ok**.

5. Select **Add** and keep adding any values you would like in your email subject and body.

The values you have added will be assigned placeholders. At the time of sending the email, the connector will pick up these values and pull them into the email subject and body where specified.

6. Add the placeholders to the Subject and email body as desired. Enable the Default switch for the translation you would like to serve as the default translation. If you only have one email subject and body translation, make it the default. **Save** and close.

7. Run the report. Navigate to your record, select **Lasernet Email** (or predefined destinations depending on your setup) and click the ellipses button.

8. Select **Load defaults** and then click **Ok**.

The email body loads the values for the placeholders:

HTML in Email Body

Lasernet Connector for Microsoft Dynamics 365 Finance and Operations includes the option for preparing an HTML (XHTML) email body instead of the plain text in Lasernet FO Connector.

To add an image to the email body:

1. Click the **Insert image** button on the email body toolbar.

2. Click the **Select image file** button , choose an image and once you are happy with the Preview, click **Ok**.

It is possible to duplicate the configuration of email subject, email body and placeholders (%1, %2, etc.) by clicking the **Duplicate** button on the Action pane.

Once you have duplicated, enter a valid language in the language dropdown.
