

## How to send multiple sheets as separate attachments in one Email

Kate Coles - 2022-08-25 - Comments (0) - Lاسernet General Information

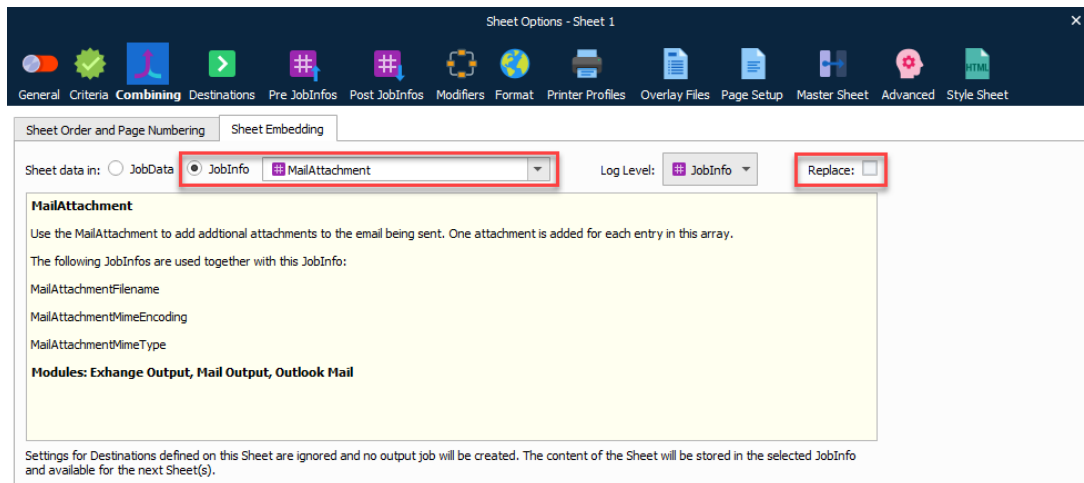

This article will describe the settings you can use to send multiple sheets as separate attachments in an Email using Sheet Embedding with JobInfos and JobData within Sheet Options.

Each sheet within Lاسernet may produce its output to its own destination (such as an EMF sheet to a printer and a PDF sheet to email) or combining may be used to combine sheets into a single output (such as combining multiple PDFs into a single PDF output). However, sending multiple sheets individually to a single output is also possible.

How to send two sheets as separate attachments in one Email

1. Within Sheet Options for Sheet 1 navigate to the **Combining** tab, then click **Sheet Embedding**.
2. Click **Jobinfo**. Select or type **MailAttachment** and ensure you clear the checkbox for **Replace**.

Sheet Options - Sheet 1

General Criteria **Combining** Destinations Pre JobInfos Post JobInfos Modifiers Format Printer Profiles Overlay Files Page Setup Master Sheet Advanced Style Sheet

Sheet Order and Page Numbering Sheet Embedding

Sheet data in: ☐ JobData ☒ JobInfo ☐ MailAttachment Log Level: ☐ JobInfo ☐ Replace: ☐

**MailAttachment**

Use the MailAttachment to add additional attachments to the email being sent. One attachment is added for each entry in this array.

The following JobInfos are used together with this JobInfo:

MailAttachmentFilename  
MailAttachmentMimeEncoding  
MailAttachmentMimeType

**Modules: Exchange Output, Mail Output, Outlook Mail**

Settings for Destinations defined on this Sheet are ignored and no output job will be created. The content of the Sheet will be stored in the selected JobInfo and available for the next Sheet(s).

3. Within Sheet Options for Sheet 2, ensure the **JobData** radio button is selected within the Sheet Embedding tab.

4. Navigate to the **Post JobInfos** tab and include the JobInfos shown below:

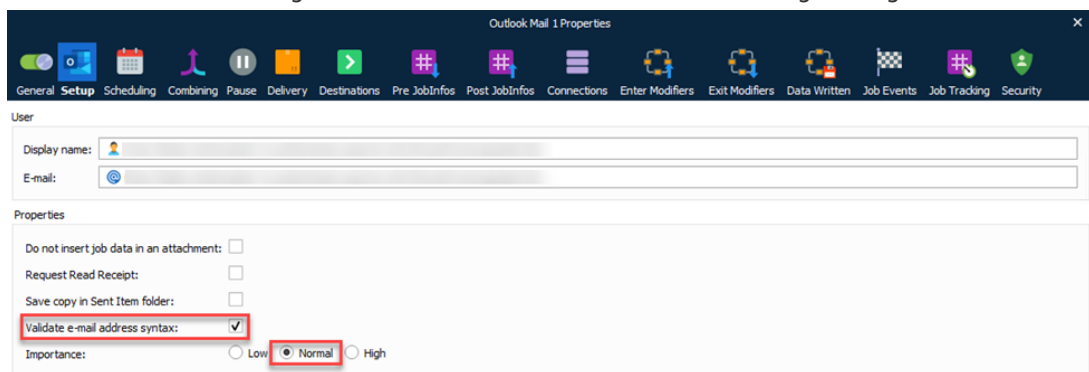

5. Ensure the **Replace** checkbox is only selected for JobInfo "FileName".

The result will give you one Email with separate PDF attachments, each PDF being a separate sheet with its corresponding content.

Example:

The Email was sent using the Outlook Mail Module with the following settings:

How to send three sheets, or above, as separate attachments in one Email

1. Within Sheet Options for Sheet 1 navigate to the **Combining** tab, then click **Sheet Embedding**.

2. Click **Jobinfo**. Select or type **MailAttachment** and ensure you clear the checkbox for **Replace**. Repeat this for Sheet 2.

Sheet Options - Sheet 1

General Criteria **Combining** Destinations Pre JobInfos Post JobInfos Modifiers Format Printer Profiles Overlay Files Page Setup Master Sheet Advanced Style Sheet

Sheet Order and Page Numbering Sheet Embedding

Sheet data in: ☐ JobData ☒ JobInfo ☐ MailAttachment Log Level: ☐ JobInfo Replace: ☐

**MailBodyHTML**

Use the MailBodyHTML JobInfo to set the actual contents of the mail when sending HTML-email. If you want to send plain-text you should use MailBody instead. The contents of MailBodyHTML overwrite the content of MailBody

**Modules: Exchange Output, Mail Output, Outlook Mail**

Settings for Destinations defined on this Sheet are ignored and no output job will be created. The content of the Sheet will be stored in the selected JobInfo and available for the next Sheet(s).

3. Within Sheet Options for Sheet 3, ensure the **JobData** radio button is selected within the Sheet Embedding tab.

Sheet Options - Sheet 3

General Criteria **Combining** Destinations Pre JobInfos Post JobInfos Modifiers Format Printer Profiles Overlay Files Page Setup Master Sheet Advanced Style Sheet

Sheet Order and Page Numbering Sheet Embedding

Sheet data in: ☒ JobData ☐ JobInfo ☐ MailAttachment

4. Then navigate to the **Post JobInfos** tab and include the JobInfos shown below:

Sheet Options - Sheet 3

General Criteria Combining Destinations Pre JobInfos **Post JobInfos** Modifiers Format Printer Profiles Overlay Files Page Setup Master Sheet Advanced Style Sheet

Name	Value	Replace	Master	LogLevel	Criteria
FileName	Sheet3.pdf	<input checked="" type="checkbox"/>	<input type="checkbox"/>	JobInfo	Criteria
MailAttachmentFileName	Sheet2.pdf	<input type="checkbox"/>	<input type="checkbox"/>	JobInfo	
MailAttachmentFileName	Sheet1.pdf	<input type="checkbox"/>	<input type="checkbox"/>	JobInfo	

5. Ensure the **Replace** checkbox is only selected for JobInfo "FileName".

The result will give you one email with separate PDF attachments, each PDF being a separate sheet with its corresponding content.

Example:

PDF sheet3.pdf 3 KB

PDF sheet1.pdf 3 KB

PDF sheet2.pdf 3 KB
