This article explains the process of how to set up and connect to a client via an Azure Hybrid Connection. Please follow these steps:

1. Open **Azure** and create a relay.
2. Click **Hybrid Connections**.

The screenshot displays the Azure portal interface for a Hybrid Connection. The left-hand navigation pane is visible, with 'Hybrid Connections' highlighted. The main content area shows the 'Essentials' section for the 'Example-Relay' Hybrid Connection. Key details include: Resource group (Support-USLab-Mateo), Status (Active), Location (East US), Subscription (Private Support), and Subscription ID (0ce4e897-cb38-4ed4-802d-4cea58d54d53). Below this, there is a 'Show data for the last:' dropdown menu set to '1 hour' and a line chart with three data series: Listener, Sender, and Throughput. The chart shows a single data point at 9:30 AM with a value of 1.0 for the Listener series.

4. Once you have created your Hybrid Connection, the following page is displayed. Click **Shared access policies**.
