

Lasernet Archive button is slow

- 2022-10-21 - Comments (0) - AX 2012 FAQs

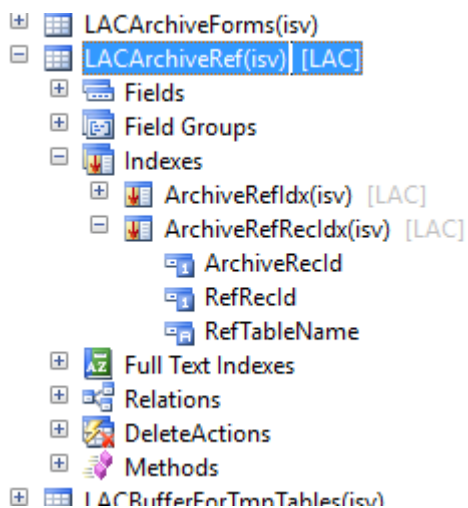

This article provides a solution for a slow Labeled Archive button when you try to select the Labeled dropdown menu from a Journal in AX 2012.

The reason for the slowness in the dropdown menu is that the database has a **Compatibility level** that is set to SQL 2014. This then makes our index on the LabeledArchiveRef table incorrect.

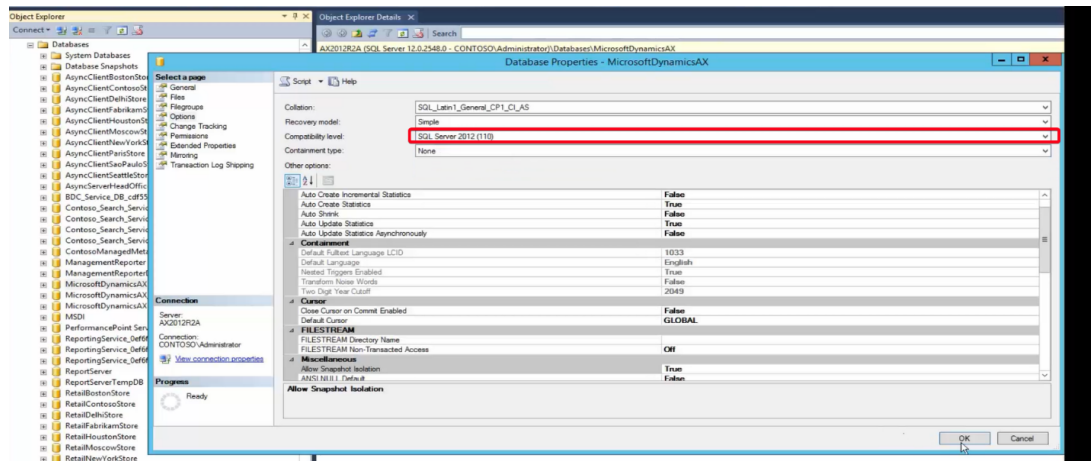

Resolution

1. Check if index ArchiveRefReclId is created on table LabeledArchiveRef.

2. If it is not, import the attached XPO (zip file) or change the database **Compatibility level** to 2012.

Database **Compatibility level** changed to 2012.
