Lasernet Service stops after windows update KB4338815

- 2021-08-25 - Comments (0) - Lasernet Developer FAQs

After Windows update *KB4338815,* the Lasernet Developers "Update" function will not work anymore.

Every time a user clicks on **Update**, neither do the services respond nor can they be stopped in Task Manager.

1. Reboot the machine every time you make an update.

After you install any of the [July 2018 .NET Framework Security Updates](#), a COM component fails to load because of "access denied," "class not registered," or "internal failure occurred for unknown reasons" errors.

The most common failure signature is the following:

Exception type: System.UnauthorizedAccessException

Message: Access is denied. (Exception from HRESULT: 0x80070005 (E_ACCESSDENIED))

2. For more information on a resolution to this, please see [KB 4345913](#).

 After installing KB4346745, the error will not occur.

This solution applies to Lasernet 7 and 8. Microsoft fixed it in 2018 as per above so does not apply to new or updated servers.
