

## Missing Lasetnet Custom Port option in D365 FinOps print selection

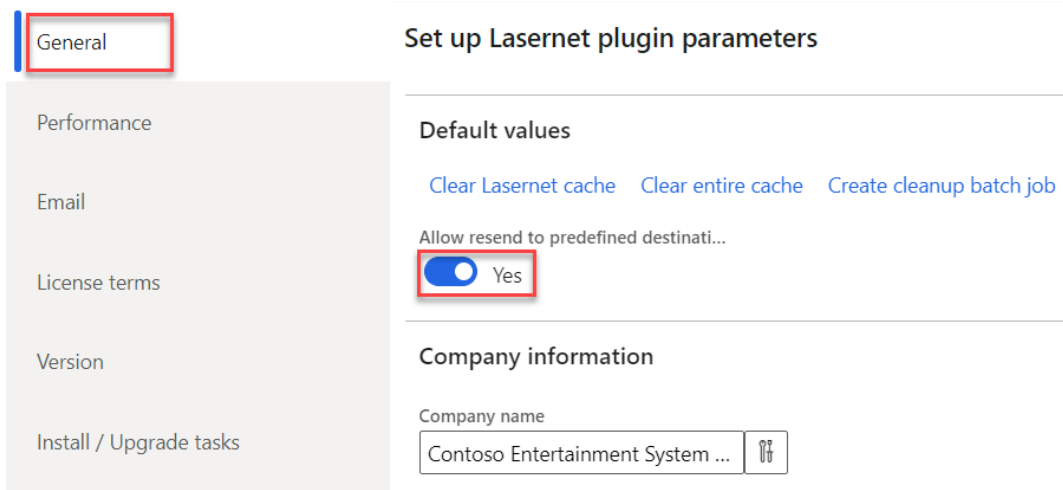

Claire Oakey - 2023-01-05 - Comments (0) - General

# Lasernet for Dynamics 365

This article provides a solution for when Lasetnet Predefined or Custom Port options in D365 FinOps are missing in the print dialog when selecting destinations, and for when the Pre-defined and Custom Print Management Settings are missing when trying to print an invoice.

### Solution

Navigate to **Lasernet > Setup > Parameters > General**, then set "Allow resend to predefined destinations" to **Yes**.

The screenshot displays the configuration interface for the Lasetnet plugin. On the left, a sidebar lists navigation options: General (highlighted), Performance, Email, License terms, Version, and Install / Upgrade tasks. The main content area is titled 'Set up Lasetnet plugin parameters' and is divided into two sections. The 'Default values' section includes links for 'Clear Lasetnet cache', 'Clear entire cache', and 'Create cleanup batch job'. Below these links, the 'Allow resend to predefined destinations' setting is shown as a toggle switch that is currently turned on, with the word 'Yes' next to it. The 'Company information' section contains a text input field for 'Company name' with the value 'Contoso Entertainment System ...' and a small icon to the right.
