Lasernet for Dynamics 365

This article describes the print request page for documents and the Lasernet Print Archive function.

Document Printing

When the *Print* action is selected on documents in Dynamics 365 Business Central (e.g. *Order Confirmation* on a *Sales Order*) defined for Lasernet integration, the Lasernet [document name] request page opens.

The *Lasernet Option* FastTab includes the field that determines what happens when the **OK** button is clicked. The options are:

- Preview - Dynamics 365 Business Central waits for Lasernet to generate the PDF and shows it on the user screen. This option requires Acrobat Reader or another PDF viewer.
- Save to PDF - Lasernet creates a PDF and returns it to the user PC, where Dynamics 365 Business Central opens a save file window in which the user can choose a name and a folder.
- Print - A Print Dialog opens, and a printer can be selected. The printer name is written in the XML file for Lasernet and it is printed on the physical printer.
- Send E-Mail - Lasernet sends a document as an e-mail using the address specified in

the **Lasernet E-Mail** field on the customer/vendor card. This option requires an additional mail server setup in the Lasernet software.

- E-Invoice - Generates a document in another format, such as XML. This option requires additional mapping/setup in Lasetnet.
- Fax - Sends a document to the fax indicated in the **Lasernet Fax** field on the customer/vendor card. This option requires additional setup for integration to a fax solution, such as Microsoft Fax.

The fields on the [Document Name] FastTab are used for filtering.
