Regions (Order and Page Break)

Alex Pearce - 2024-03-18 - Comments (0) - Lasernet Form Editor 9 - Designing Forms

Lasernet

The order of regions in the form design is determined by the order of regions in the **Conditional Area** dialog.

Exercise

Download and import the attached configuration called **27. Regions (Order and Page Break)** in **Lasernet Developer 9**. Afterwards, go to the **Forms** section and open the **Sample** form.

1. On the **Sheet** menu, click **Conditional Area**.

2. In the **Conditional Area** dialog, select **No Discount** region.

3. Click the **Move Down** button to move the **No Discount** item down, so it is listed below the **Discount** item. Thus, you reorder regions. Once you are done, click **Ok**.

The **No Discount** and **Discount** regions are now reordered.

The next step is to insert page breaks after the first two regions.

4. Open the **Conditional Area** dialog, select **Discount** in the **Regions** list, and then click the **Edit** button. In the **Edit Region** dialog, select the **Page break after** check box. Once you are done, click **Ok** to confirm the change.

5. In the **Conditional Area** dialog, select **No Discount** in the **Regions** list, and then click the **Edit** button. In the **Edit Region** dialog, select the **Page break after** check box.

6. Once you are done, click **Ok** to confirm the change.

Page breaks are now added after the two first regions. Switch between the grab file tabs as well as between the page tabs to see the effect. As a result, the number of output pages in the form has increased.

When the **Sample (Multiple Pages).xml** grab file is open, the **Discount** region (and only this region) is printed on the first and second page.

The **No Discount** region (and only this region) is printed on the third and fourth page.

The **Additional Costs** region is printed on the last page.

Note: You can right-click any of the page tabs: **First Page**, **Middle Page**, **Last Page** or **Single Page**, and select the required page check box to bring a region to focus.
