

## Sharepoint Output module sometimes fails when uploading files

- 2021-08-25 - Comments (0) - Lاسernet Developer FAQs

# Lاسernet

This article based on Lاسernet 7/8 and Sharepoint 2013.

The Sharepoint Output module sometimes fails when uploading files. When files are small, the issue is rare, however, with larger files, there can be a failure, described by the following log:

'Failed to send HTTP request body'.

The cause is either SSL or the use of a reverse proxy(F5) between the Lاسernet server and the Sharepoint server. We recommend using HTTP (not SSL) and no reverse proxy to resolve this issue.
