

Updating the Transact Print Preview Interface after changing the name of the Lasetnet server.

Ross Glover - 2022-06-22 - Comments (0) - Temenos FAQs

temenos

If you are using the Transact Print Preview Interface and your Lasetnet and Transact software is installed on different servers, you will need to update the Transact **web.xml** file to use the new Lasetnet server name. More details on changing the Lasetnet server name can be found at [Changing the Lasetnet server name](#).

These instructions are only relevant to the older Transact installations.

Updating the interface

To update the Transact Print Preview Interface after changing the name of the Lasetnet server, follow these steps:

1. Locate and open the **web.xml** file which can be found in the `./BrowserWeb.war/WEB-INF` folder in the Transact installation directory.
2. Locate the **PrintPdfFilter** section. The Lasetnet web server input ports that are being used will be listed.
3. Update the input ports to reflect the new Lasetnet server name.

In the example below, 'EFSTest', is the name of the Lasetnet server that needs to be changed.

PrintPdfFilter

```
<filter>
  <filter-name>PrintPdfFilter</filter-name>
  <filter-class>com.efstech.temenos.filters.PrintPdfFilter</filter-
class>
  <init-param>
    <param-name>target</param-name>
    <param-value>/servlet/LaserNetDataServlet</param-value>
```

```
</init-param>
<init-param>
  <param-name>lasernet</param-name>
  <param-value>
    http://EFSTest:28080/webinputport/T24Input?preview
  </param-value>
</init-param>
</filter>
```

4. Save the changes made to the web.xml file, and restart Transact for them to take effect.
