

## Why Are there Two Folders per Company in Lowercase and Capital Letters in Azure Storage Explorer?

- 2024-05-31 - Comments (0) - Lasename FO Connector FAQs

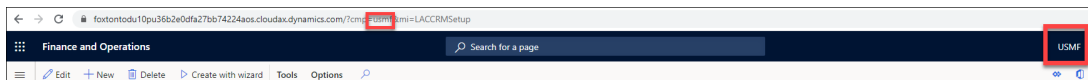

# Lasernet for Dynamics 365

In Lasename FO Connector, **CompanyId** folders for a legal entity are sometimes capitalized, while some other times they are not.

For example:

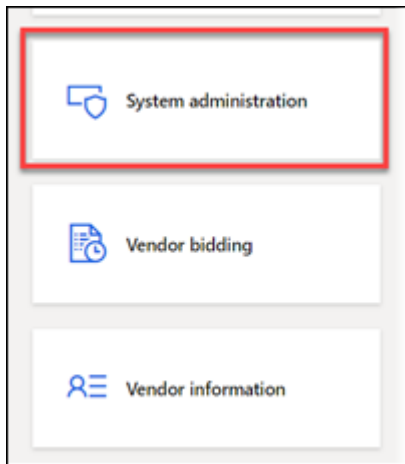

Another example of this is the default company **USMF**. Its name is capitalized, but references to this company are not:

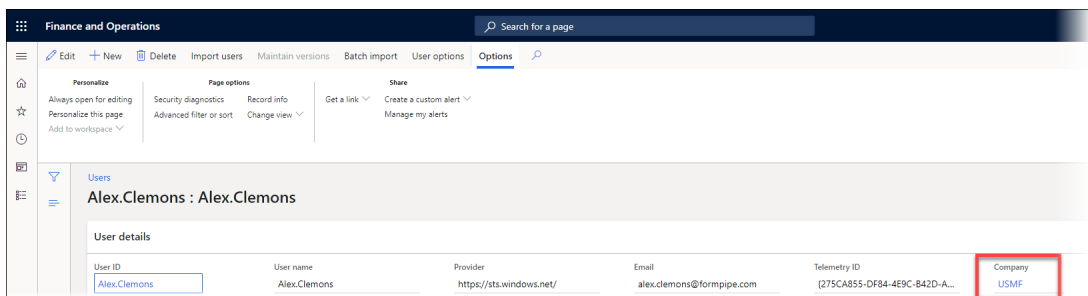

This is due to the default company not being set on the user account.

To set the default company, follow these steps:

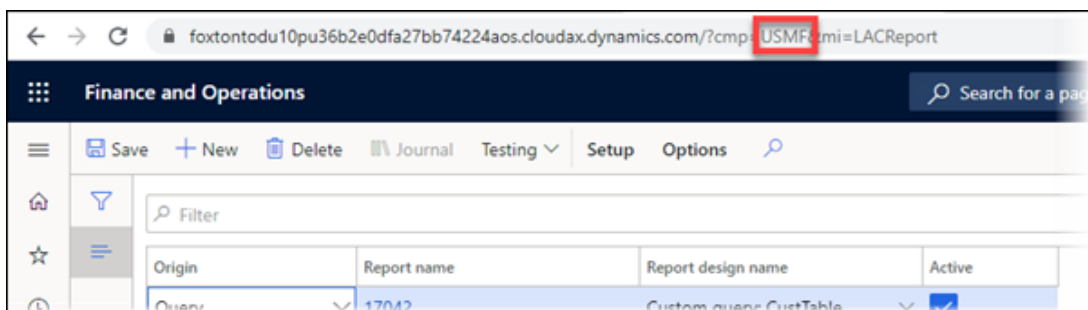

1. Open **Systems administrator**.

2. Click **Manage Users** and select your username from the User ID list.
3. Click the **Company** field dropdown menu and set the default company name.

The **CompanyId** is now in capital letters, and the archived reports are in the folder **USMF** instead of **usmf**.
