

Will my printer work with Lاسernet?

Nicole Ojeda - 2021-03-26 - Comments (0) - Lاسernet FAQs

Lاسernet

Lاسernet uses existing Windows print drivers to format your output to match its target destination (Postscript PCL, TIFF, PDF and XML with or without overlay). So if your printer works with your Windows server, then it will work with Lاسernet as well.

Whilst it is exceptionally rare that we encounter printers that do not work well with Lاسernet, we always recommend that before purchasing any printers to use with our software, you perform an on-site trial to ensure 100% functionality and compatibility.
