Lasernet for Dynamics 365

Lasernet Connector BC Release Version 3.0.2.3

Release date: 19th April 2022

New Features and Enhancements

The purpose of this section is to outline the new features, enhancements and fixes of Lasernet Connector BC version 3.0.2.3.

#291525 – Document Layout generates incorrect data when set in certain conditions

Document Layout custom field can generate a wrong Line No. for filtering in specific cases.

For example, this can happen when a Sales Document has Sales Lines *10000, 20000* and *40000* (*30000* was deleted before posting).

During the posting, Sales Shipment Line or Posted Warehouse Shipment Line has Line Nos *10000, 20000* and *30000*, with relation to *10000, 20000* and *40000* respectfully.

When the top-level is starting from Sales/Posted Warehouse Shipment Line and has a sub-item Sales Line with a specified relation, the code was incorrectly assigned a Line No. for displaying *10000, 20000* and *40000*. As a result, data that is required for the original line *30000* was filtered out. This is now fixed.

#294321 – System generated lines do not show up on reports

System-generated lines that BC is generating such as Prepayments lines on an invoice or roundings were not displayed on the Lasernet report.
This is now fixed.

#281050 – Error upon printing Warehouse - Shipment

Warehouse shipment report shows this error:

"Record (7320) is not compatible with Codeunit.Run (record(5766)). "

This is now fixed.
