#348005	Additional hooks have been added in the reports for better flexibility	Feature enhanced
#348731	Changes to Lasernet Export/Import Attachments Setup	Feature enhanced
#337912	Report Selections Export / Import correction	Fixed

Feature enhanced

#338171 - Lasetnet Archive is added to Email Show source

Within the email dialog and Show Source, we have added Lasetnet Archive as a source link to the links from BC.

#337434 - Lasetnet Archive supports Draft Emails

Lasetnet now supports Draft Emails. If you open the email dialog and do not wish to send the email immediately, users can press Escape and keep the email as a draft. Lasetnet saves the record within Lasetnet Archive. You can then navigate to the Lasetnet archive or BC standard Email Outbox.

#342265 - Print Archive is renamed to Lasetnet Archive

We have renamed Print Archive to Lasetnet Archive.

#338307 - Change to Lasetnet Sales Credit Memo request page

In the previous version, we added more filters to the Sales Invoice request page. These filters have now been added to Sales Credit Memo request page.

#330892 - New report - Sales Document Test

We now have added the Sales Document Test report to the Lasetnet Report list. Please note

that this report supports Sales Order, Sales Invoice, Sales Credit Memo and Sales Return Order.

#345064 - New report - Purchase Receipt report

We have added the Purchase Receipt report to the Lasernet report list and have added this design to the Lاسernet Configuration package.

#345111 - New report - Purchase Return Shipment report

We have added the Purchase Return Shipment report to the Lاسernet report list and have added this design to the Lاسernet Configuration package.

#316705 - Changed the "body" view in Lاسernet Archive to HTML instead of the text field  
Before:

Now:

#250627 - Preview screen viewer updated

We have updated our Preview viewer, so it supports portrait and landscape. Now it scales up and down to present the document depending on the layout. Please note that it looks different depending on which browser you are using e.g., Chrome vs Edge.

#328683 - Fixed attachments support

Now you can add multiple fixed attachments to a report and control each attachment by Language code. For example, it could be Terms & Conditions in different languages or marketing campaigns, etc.

Fixed attachments can be added within Lاسernet Report Setup.

#335466 - Miscellaneous menu added to the navigation bar

#342331 - Added the possibility to select a printer on the request page

Users can now select the printer directly on the Request page when selecting the Lاسernet Printer option.

#293807 - Customer Statement - Only create XML files for customers with entries  
When printing a Customer Statement from the main Lasernet Request page, we now have the option to filter on Customers with ledger entries only and customers with a balance.

This is useful when users only want to see customers with a balance or entries.

#337372 - When Posting and Printing from Warehouse Shipment, all existing Sales Shipments are printed

This is now corrected so we only print the selected shipments from the Warehouse Shipment.

#337623 - Post & Print Warehouse Shipments that have several Sales Shipments causes an error if no default printer is found

Printing multiple sales shipments from Warehouse Shipments could give you the following error:

This is now fixed.

#337736 - Custom Fields names are back to Standard field names after upgrade

If you have Custom Field names within Document Layout, the name will be changed back to standard names from the fields.

Before upgrade:

After upgrade:

#338166 - Sales Draft Invoice and Sales ProForma Invoice have no Bill-to Customer [VAT] No. caption

Bill-To Customer VAT No. caption has been added to the two reports:

#338215 - Upgrade process breaks if there are Document Layout Filter entries with no Filter Table No. selected

During an upgrade, you may encounter an error caused by an empty Filter Table no. within Document Layout. This is now fixed.

#340957 - Total Assignable quantity calculation fix

Our Assignable Qty calculation within the total section on our Purchase Document Test report was incorrect. This is now fixed.

#342537 - Report run via Job Queue does not create an archive if specified

If you run a report via Job Queue, the job will be executed correctly and processed through Lasernet, but the PDF wasn't saved in the Lasetnet Archive. This is now corrected.

#342796 - Specifying request page filter longer than 20 characters leads to an inability to run a report

If you type in more than 20 characters within the filter on the Customer Statement Request page, it will show an error like this:

Error

The length of the string is 50, but it must be less than or equal to 20 characters. Value:  
01121212|01445544|01454545|01905893|01905899|20000

This is now fixed.

#343495 - Added Symbol to the Currency node in XML

We have added the currency symbol into a new tag in the XML file e.g. £.

#344259 - Prevent creating printers with empty ID

Within Lasetnet Printers, it was possible to create a new record with an empty value. We have now prevented this.

#345590 - Empty Placeholder Entry Name causes error during attempt to email using Template

Adding an empty record within Lasetnet Placeholder caused an error when emailing:

Error:

String cannot be of zero length.

Parameter name: oldValue.

This is now fixed.

#347674 - Email template Subject default value

In certain conditions, an Email template from another language was used if the required language wasn't found. This is now fixed.

#347676 - Support unicode characters in email template

When using Ukrainian, Japanese, or Greek emoji or any other Unicode characters in the mail body and subject field, the characters changed after reopening the Email Template page for modification along with the wrong XML file.

Error:

This is now fixed.

#348005 - Additional hooks in the reports for better flexibility (for Developers)

Several new hooks have been added. This can be used to add a dropdown list on the Lasernet Request page along with the selected value to the report / XML file that is going to the Lاسernet server.

#348731 - Changes to Lاسernet Export/Import Attachments setup

We have improved our export/import framework, so it includes the new function 'Fixed Attachments'.

#337912 - Report Selections Export / Import correction

Upon importing Report Selections, sometimes users receive the error

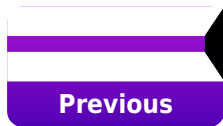

Report XXX uses the RDLC (built-in) which cannot be used as an email

body.

This is due to a missing value for the field Email Body Layout Code, so it remains empty upon import.

This is now fixed.
