Maintenance Report

This section is an overview of the fixes and features included with this version.

Note

If you encounter difficulty whilst using Lasetnet BC Connector, contact us via the **Create Ticket** button in the Support Portal.

Internal Ref.	Issue/Feature	Details	Status
#274260	Predefined Destinations.	A new option is now available on the Lasetnet Request page entitled Predefined Destinations. This option allows the user to control destinations such as file formats like EDI, Excel and Word documents on the customer or vendor card.	New Feature
#274827	Option to select Custom Port.	Custom Ports is a new function that allows you to specify a name for a destination type, for example - FTP Formpipe.	New Feature

#274827	File Format.	Users can now control which file type (EDI, Word, Excel, etc.) they want to distribute to their customers or vendors.	New Feature
#286227	All totals are now aligned across all reports.	We have streamlined all totals within the XML file, so Sales Invoice and Sales Order Confirmation, etc. have the same totals, taxes and subtotals, etc.	Feature enhanced
#293205	Edit Email properties before sending.	It is now possible to see which email addresses and mail subject and body we will send to the customer or vendor before sending the email.	New Feature
#318134	Post & Print via Job Queue did not work.	When using Post & Print via job Queue the following error used to occur: "Report 12060805 is a process-only report. Output cannot be rendered and saved to a file".	Fixed
#330963	Adding a Filter within Document Layout did not show the table name.	When adding a new filter with Document Layout, the name of the tables was not showing, so users were in doubt about which table they were selecting the field from.	Fixed
#337706	Aging Band selection on Customer Statement.	We now support Aging Band on the Customer Statement.	New Feature
#341311	When entering Description of Document Layout Field as "1" users got an error upon report printing.	If you named your new field "1" an error occurred when running the report.	Fixed
#343149	Run multiple reports to Save as PDF will only save one PDF.	If you were printing multiple documents to Save to PDF, only the last PDF was saved. We have added support for selecting multiple reports to Save as PDF so now users can zip all PDFs into a single zip file.	Feature enhanced
#347517	Prevention or notification of creation entries with empty Field No.	If you try to add Fields or Placeholders without any data, there is now a notification.	Feature enhanced

#349790	Upgrade process failing when expecting Lasernet Connector Setup to be present.	When you have a new company created in version < 4.1.2.0, and never opened the Connector Setup page or did not export and/or import Lasetnet Setup to that new company, it would cause an error when trying to upgrade to version 4.1.2.0.	Fixed
#353308	Document Layout for Transfer Shipment/Receipt Lines did not include data from custom fields.	Document Layout adding Custom fields did not work on these two reports as no data was added to the XML file.	Fixed
#354798	Restrict user from entering data in non-relevant fields on Document Layout.	Now you can only edit the fields that belong to the type of custom field you add, for example - Language Text. You can only edit the columns that belong to that type.	Feature enhanced
#364188	Customer Statement - Did not show a message with missing ledger entries when printing to multiple customers.	On the Request Page we have added an option entitled Show No Data Errors to select whether or not you would like to see the warning if there is no data present for customer xx.	New Feature
#368020	Printer Selection uses Printer ID on behalf of Printer Name.	Before we were using the Printer Name when adding a printer to Printer Selections. Now we use the Printer ID which is more efficient because the ID cannot change like the name.	Feature enhanced
#369762	Email templates.	It is now possible to create several active templates for the same report and language.	Fixed
#371444	Customer Statement with Balance Only did not show correct starting entries.	If users had ledger entries for the customer and selected a period that is after the ledger entries and selected Only customers with a balance on the Request Page, it resulted in no body information.	Fixed
#323344	Connection String export shows full string.	We have changed the export, so the Connection string for Azure Service Bus and Storage is now converted into another string instead of the real string connection string. The export file can now be easily copied and the string can be used.	Feature enhanced

#367783	Preview did not work with large PDF files.	If users had a Word document as a fixed attachment and emailed it through their BC email account, they could encounter an error message.	Fixed
#368915	Error "Microsoft Office document cannot be imported."	If users had a Word document as a fixed attachment and emailed it through their BC email account, they could encounter this error.	Fixed
#374033	Fax for Inventory reports	The fax number was never added to the xml file on inventory reports.	Fixed
