

D365FO version 10.0.31 upgrade may result in Error NetModule File Missing

2023-02-22 - Kacper Dylewski - Comments (0) - D365 FO Connector News

Lasernet for Dynamics 365

You may receive the following error when upgrading Dynamics 365 for Finance & Operations version 10.0.31 PU55:

```
##[error]Netmodule file missing:Dynamics.AX.Lasernet.[#].netmodule
```

This error indicates that you may have installed a Lasernet Connector package with missing or extra NetModule files.

Solution

To resolve this error, you will need to install a Lasernet Connector package with the needed NetModule files. This can be done by upgrading to our latest available LAC version.

If you have an affected package and do not wish to upgrade, we have made alternative packages for older LAC versions temporarily available on our [downloads page](#).

Affected Packages

Please see below for known affected LAC packages:

- 6.16
- 6.17.1 PU49
- 6.17.2 PU49

Please see below for temporarily available alternative packages to the affected versions:

- [6.16 PU55](#)
- [6.17.1 PU51](#)
- [6.17.2 PU51](#)

If you are encountering this error when installing a package with the correct NetModule files or you are not on one of the listed affected versions, please refer to [this article](#) for a solution for best practice on resolving the error.
