

Deprecation of Azure Storage Use in Dynamics 365 Finance and Operations

2024-10-31 - Alice Petruzzella - Comments (0) - Lasetnet FO Connector News

Lasernet for Dynamics 365

Earlier today, we identified an issue regarding the deprecation of Azure Storage use in Dynamics 365 Finance and Operations, which, therefore, also affects Lasetnet FO Connector.

This deprecation has been introduced within a Quality update and blocks the Flight-mode access to Azure Storage. Loss of access to the Azure Storage will result in the errors outlined below when attempting to print reports with Lasetnet.

Microsoft has released a fix for this issue in Quality Update 65 (10.0.41). Therefore, we advise users on 10.0.41 to ensure they are on a working Quality Update.

The following versions **ARE NOT WORKING**: from 10.0.41 (10.0.2015.97 - 102).

The following versions **ARE WORKING**: 10.0.41 (10.0.2015.54 and 0.0.2015.103+ or newer) and 10.0.42. (Last updated January 2024)

Update from Microsoft

Microsoft have acknowledged the issue, and the fix is currently in status 3. The issue number is 4444487.

Link to issue: [Known issues | Power Platform admin center \(microsoft.com\)](#)

The screenshot shows the Power Platform admin center interface. The main content area displays a known issue titled "Failures when attempting to generate reports that contain the Lasetnet ISV solution from Formpipe". The issue description includes a "Problem" section stating that after updating to quality update 10.0.2015.97 or later, reports generated with the Lasetnet ISV solution can fail with an error message: "System.MissingFieldException: Field not found: 'Microsoft.DynamicsOnline.Infrastructure.Components.SharedServiceUnitStorage.StorageContext.StorageConnectionString'". A "Workaround" section is highlighted with a red box, stating: "Microsoft is generating a hotfix for this error which will be available for uptake by November 3, 2024. Updating to the quality update containing this hotfix is expected to resolve the issue." The "Details" section shows the product as "Dynamics 365 Finance", created on "11/1/2024", status as "Active", and issue ID as "4444487". At the bottom, there is a "Was this known issue helpful?" section with "Yes" and "No" buttons.

Problem

The following error can occur if flight mode is disabled:

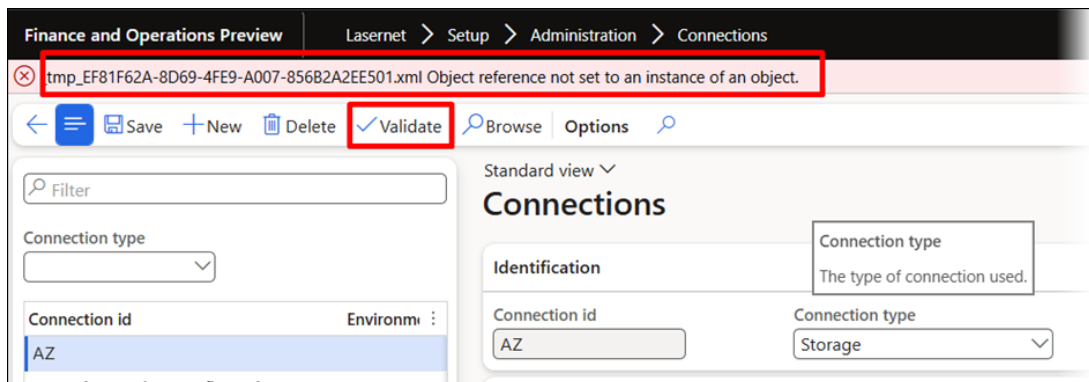

Load from Catalog

Error

EnableSharingOfValidStorageConnectionString is OFF. Fetching a valid storage connection string has been disabled.

Validate Connection

Error
