Formpipe Cloud Release Version 22.1

2022-02-04 - Usama Musthafa - Comments (0) - Formpipe Cloud Release Notes

Release Version 22.1

Release date: 4th February 2022

New Features and Fixes

The purpose of this section is to outline the new features and fixes of Formpipe Cloud version 22.1

Platform Enhancements

Refreshed Disaster Recovery setup and improved protection for resources on customer deployments

- Enabled GRS on Azure SQL Databases
- Cross Region Backups
- Soft Delete enhancements for Autoform DM deployments
- Improved SQL performance for DM deployments
- Implemented Zone Redundant Storage
- Enabled GRS on the Storage Accounts
- Resource lock improvements on customer deployments

Features

New Gateway based system for external access

- Removes the need for IP whitelisting and VPN Connection
- Improves ease of use and reduce barriers to entry
- Enhances support for the hybrid working world

Penetration Testing

This version of Formpipe Cloud has been rigorously tested by an external penetration

testing company and overall the platform was found to be well designed and secure. However, this release contains several small security and back end changes based on the recommendations provided in the report.
