Enhancements - Lasetnet FO Connector 6.18.5

Lasetnet FO Connector 6.18.5 is a Quality update for 10.0.35 (PU59) and 10.0.36 (PU60) and does not contain any adjustments in LAC365FO apart from a single deprecation introduced in standard Dynamics D365FO PU59/PU60.

Main focus:

- **Quality-update**

This is provided through the following fixes and enhancements in Lasetnet FO Connector 6.18.5 :

377844@LAC365FO - Build for PU59 and PU60. Issue when adding menu location: Method not found

376929@LAC365FO

The following error was thrown when making a look-up in the field **Menu location**:

Error

Method not found: 'Boolean

Microsoft.Dynamics.AX.Metadata.NodeLib.Node.DoesElementExist

(Microsoft.Dynamics.AX.Metadata.Extensions.CanonicalForm.ModelElementType,

System.String)'.
'>

Everything would work as expected with already added menus. The issue only arose when trying to add a new menu.

Fixed by building the package for 10.0.35 (PU59) and 10.0.36 (PU60) without any code changes.

Case no.	Description	Ticket no.
377844@LAC365FO 376929@LAC365FO	Build for PU59 and PU60. Issue when adding menu location: Method not found	#34227 #34243 #34337
376257@LAC365FO	Obsolete on BankPaymAdviceVendController has been changed to "throw error on compile"	

Introduction

This document describes the enhancements in Lasernet FO Connector 6.18.5.

Lasernet version 6.18.5 contains the following models, including the model for the integration with LAsernet CE Connector (Dataverse) and the models for the **LAsernet print buttons**.

Model	Description	Location/remark
LAsernet	Core and main engine for LAsernet FO Connector	LAsernet Requires activation Key LAsernet > Setup > Parameters > License terms
LAsernet81Spec	Additional requirements in relation to 8.1 and newer versions of standard Dynamics 365 Finance and Operations	
PRNButtons	LAsernet print buttons	Print buttons
PRNButtonsLACAdaptor	Adaptor between the LAsernet print buttons and LAsernet	
LACCE	Provide the integration to CE from LAsernet FO Connector	LAsernet > Dataverse/Dynamics 365

LACMSHotfixes	Hotfixes for standard Dynamics 365 Finance and Operations	System Administration > Setup > Hotfixes from Lasernet
Lasernet Test Suite	Test & Performance Suite	Lasernet > Test and performance suite Requires activation Key Lasernet > Test & performance suite > Parameters
LasernetPU35Spec		Support of Wave labels in Lasename FO Connector
Lasernet Autoform DM	Integration to the Autoform (Archive)	

Objects

Please ensure the following new objects/dll-files are added to TFS in case of not just installing/deploying the AOT-package.

- LACSupport.dll.config
- XmlDiffPatch.dll
- XmlDiffPath.View.dll

And the following is the complete list of objects which is not automatically added:

The version number should contain version 6.18.5 (as shown in the following image) after either installing or deploying the AOT-package.

Lasernet > Setup > Parameters

Version numbers:

PU59: 6.18.5.2309041

PU60: 6.18.5.2309012

Add the AOT-package

Either through LCS - Apply a deployable package to an environment

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/dev-itpro/deployment/apply-deployable-package-system>

Or by installing a deployable package - Requires RDP access to

environment

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/dev-itpro/deployment/install-deployable-package>

Lasernet FO Connector 6.18.x is supported with Lasernet 9 and Lascript 10 and a setup for either Lascript 9 or Lascript 10 is required for any new installation and when upgrading from Lascript 8.

Pre-requisite/Technical

It is best practice to refresh the Stylesheet after upgrading Lascript FO Connector as this could help avoiding potential issue(s).

Please, use the following Register selection classes located in **Lasernet > Setup > Backup parameters > Setup Default Selections** in case an error like the following is thrown when using **Export, Import** or **Copy across companies** (legal entities).

The newly introduced upgrade framework in Lascript FO Connector 6.18 should manage but could 'fail' in a scenario when using a TFS/Dev build as this would require executing [Microsoft.Dynamics.AX.Deployment.Setup.exe](#).

Error message

Error

Please try to run 'Register selection-classes' before processing

OR

Error

Cannot create a record in Lascript default export/import selection (LACDefaultSelection).
The record already exists.

Object reference not set to an instance of an object.
