## Bug fixes & Enhancements - Lasetnet FO Connector 6.19

375775@LAC365FO: Translations are now displayed next to languages in “Select languages”

When adding labels in the **Report group** in Lasetnet FO Connector 6.19, the translations are now displayed next to the languages shown in **Selected languages**.

Location: **Lasetnet > Setup > Lists > Report group > Add label(s)**

### Previous version of Lasetnet FO Connector

**Lasetnet FO Connector 6.19**

375720@LAC365FO: Name of dialog fields is “Text ID” instead of “Control name”  
Language/label ID was shown when using **From default**. This is now fixed for a field in the dialog setup.

**LAC\_Label\_Text** (not **LAC\_Label\_Id**) should be shown when executing the Query report.

**Previous version of Lasernet FO Connector Lasename FO Connector 6.19**

375668@LAC365FO - Data Source replacement does not work when copying a subreport from one report to another

A problem used to arise when copying a subreport from one report to another: despite choosing what to replace, the data source/table was not properly replaced.

This has been fixed.

The following example shows that the data source/table CustConfirmJour should be replaced with the data source/table CustInvoiceJour when copying the subreport from the report SalesInvoice into the report SalesConfirm.

**Previous version of Lasename FO Connector Lasename FO Connector6.19**

375405@LAC365FO - Issue using filter within the structure when using the task recorder (playback)

In previous versions it was not possible to record the use of a filter in the report list and within the structure/elements.

This meant that the recorder did not find the intended report when running the playback.

This has been fixed: it is now possible to use a filter for both the report list and within the structure/elements.

Search for a value within the structure/elements:

The task recorder did not include the steps used for the filter:

**Previous version of Lasename FO Connector Lasename FO Connector 6.19**

374919@LAC365FO - Typo in warning message in the Query Wizard

A typo was found in a warning message in the Query Wizard. The word “reference” was

spelled as “refference”: this has been corrected.

375463@LAC365FO - Incorrect Help text on Document handling destinations

All help texts for the destinations in document handling have been changed as they did not match the “Document handling” tab.

#### **Previous version of Lasernet FO Connector Lasename FO Connector 6.19**

374045@LAC365FO - Remove destination type from “Print to” lookup when working with handheld devices

In Lasename FO Connector 6.19, all printer names have been modified to exclude “Lasename Print:” for enhanced readability in the Warehousing app.

#### **Previous version of Lasename FO Connector Lasename FO Connector 6.19**

374026@LAC365FO - Report attachment from Archives/Attachments - Parameter needed for maximum number of attachments in an email

In Lasename FO Connector 6.19, it is possible to set a maximum number of attachments to an email.

In the previous version, the maximum number of attachments was set to 100 and not adjustable.

Location: **Lasename > Setup > Parameters > Performance**

In the case of a non-specified maximum limit, when there are 101 attachments, the system will automatically default to a limit of 100 attachments, thereby excluding the final attachment from being added and sent.

371669@LAC365FO - Updated and added report elements loading for new SSRS report

The following prompt is shown when creating a new Report, asking whether the structure/elements should be created:

Previous versions of Lasename FO Connector required to load the elements/structure from **Reload report fields** when adding a new SSRS report.

371578@LAC365FO - Expression editor should maintain minimal height so it is always visible

The Expression editor now has a minimum restore height so that it is always visible.

Minimizing the editor will result in it being adjusted to a minimum height to ensure it does not require to be resized in case the height is set to low.

371012@LAC365FO - Incorrect labels from method added to Structure

Having two display methods with the same label added the label only once to the XML file.
