Bug fixes & Enhancements - Lasetnet FO Connector 6.19

375775@LAC365FO: Translations are now displayed next to languages in “Select languages”

When adding labels in the **Report group** in Lasetnet FO Connector 6.19, the translations are now displayed next to the languages shown in **Selected languages**.

Location: **Lasetnet > Setup > Lists > Report group > Add label(s)**

Previous version of Lasetnet FO Connector

Lasetnet FO Connector 6.19

375720@LAC365FO: Name of dialog fields is “Text ID” instead of “Control name”
Language/label ID was shown when using **From default**. This is now fixed for a field in the dialog setup.

LAC_Label_Text (not **LAC_Label_Id**) should be shown when executing the Query report.

Previous version of Lasernet FO Connector Lascript FO Connector 6.19

375668@LAC365FO - Data Source replacement does not work when copying a subreport from one report to another

A problem used to arise when copying a subreport from one report to another: despite choosing what to replace, the data source/table was not properly replaced.

This has been fixed.

The following example shows that the data source/table CustConfirmJour should be replaced with the data source/table CustInvoiceJour when copying the subreport from the report SalesInvoice into the report SalesConfirm.

Previous version of Lascript FO Connector Lascript FO Connector6.19

375405@LAC365FO - Issue using filter within the structure when using the task recorder (playback)

In previous versions it was not possible to record the use of a filter in the report list and within the structure/elements.

This meant that the recorder did not find the intended report when running the playback.

This has been fixed: it is now possible to use a filter for both the report list and within the structure/elements.

Search for a value within the structure/elements:

The task recorder did not include the steps used for the filter:

Previous version of Lascript FO Connector Lascript FO Connector 6.19

374919@LAC365FO - Typo in warning message in the Query Wizard

A typo was found in a warning message in the Query Wizard. The word “reference” was

spelled as “refference”: this has been corrected.

375463@LAC365FO - Incorrect Help text on Document handling destinations

All help texts for the destinations in document handling have been changed as they did not match the “Document handling” tab.

Previous version of Lasernet FO Connector LAsernet FO Connector 6.19

374045@LAC365FO - Remove destination type from “Print to” lookup when working with handheld devices

In LAsernet FO Connector 6.19, all printer names have been modified to exclude “LAsernet Print:” for enhanced readability in the Warehousing app.

Previous version of LAsernet FO Connector LAsernet FO Connector 6.19

374026@LAC365FO - Report attachment from Archives/Attachments - Parameter needed for maximum number of attachments in an email

In LAsernet FO Connector 6.19, it is possible to set a maximum number of attachments to an email.

In the previous version, the maximum number of attachments was set to 100 and not adjustable.

Location: **LAsernet > Setup > Parameters > Performance**

In the case of a non-specified maximum limit, when there are 101 attachments, the system will automatically default to a limit of 100 attachments, thereby excluding the final attachment from being added and sent.

371669@LAC365FO - Updated and added report elements loading for new SSRS report

The following prompt is shown when creating a new Report, asking whether the structure/elements should be created:

Previous versions of LAsernet FO Connector required to load the elements/structure from **Reload report fields** when adding a new SSRS report.

371578@LAC365FO - Expression editor should maintain minimal height so it is always visible

The Expression editor now has a minimum restore height so that it is always visible.

Minimizing the editor will result in it being adjusted to a minimum height to ensure it does not require to be resized in case the height is set to low.

371012@LAC365FO - Incorrect labels from method added to Structure

Having two display methods with the same label added the label only once to the XML file.
