Lasetnet

Lasetnet Release Version 8.9

Release date: 6th July 2018

New Features and Fixes

The purpose of this section is to outline the new features and fixes of the components of Lasetnet Version 8.10.

Lasetnet Developer

- Added a new Server->Client setting to deactivate version synchronization in Lasetnet Client, Lasetnet OCR and Lasetnet Meta.

Lasetnet Form Editor

- Fixed an issue where CSV Default values were incorrectly reset when adding or editing template headers.
- The settings 'Before' & 'After' newline led to different output results.
- Check for XML input would fail if XML was padded in either end with approximately 1024 whitespace characters.
- Fixed an issue where group block was sometimes unexpectedly moved to the next page.

Lasetnet Client

- Fixed a validation issue with empty strings in numerical fields.
- Fixed preview mode for Excel files.

Lasetnet Meta

- Fixed the preview mode for Excel files.
- Added support for "File" as the new field type.

- Fixed a bug that could leave missing meta jobs if other input modules were processing jobs simultaneously.
- Support for validation of data for the combo box as the field type.
- Fixed a server log message that could report an incorrect jobid.

Azure Service Bus

- Added a potential fix for incoming messages that mistakenly do not contain an ASB URI or duration lock, which will guarantee other ASB queues not reading the same message.

File Input

- Scheduler UI for File Input is added to the module.

HTTP Output

- Added support for specifying the field name for multipart requests.

OCR Engine

- Auto trim has now been introduced for filenames when reading the OCR Form list.

SharePoint 365

- Fixed an issue where "Sites" were always used as a prefix for subsites.
- Added support for the Microsoft Teams document library.
- Added support for overwriting when uploading documents.

SQL Editor

- Possible fix for crash in ODBC connection to Oracle 11.
