Bug Fixes

Internal Ref.	Issue/Feature	Details	Status
#395799	Changing Table No. on Document Layout Line does not change Parent Table No. on child lines.	If you decide to change a table, for example from Customer to Vendor on a Parent table, the table lookup within filters was still pointing to the old table.	Fixed
#393646	Update Permissions property on objects.	After a request from a customer, we have updated our permissions on some of our code units and reports. More to come in the upcoming releases.	Added
#393563	Unable to Email standard PO.	In certain conditions, for standard Purchase document report usage (for instance, Send Email through Document Sending Profile), users were unable to proceed due to the error "An invalid argument was passed to a 'List' data type method".	Fixed

#395780	Reminders' totals are incorrect.	The total amount in the Issued Reminder was calculated incorrectly if any Additional Fee entry was present.	Fixed
#395798	Filter Field Name is not exported/imported for Document Layout Filter.	The value of the field from the table Document Layout Filter was not covered in exporting/importing.	Fixed
#395797	FooterInfo language to be taken from the document, not from setup.	For the FooterInfo node, the language that determines the format of data in it (dates, decimals, etc) was taken from setup instead of the document, if eligible.	Changed
#395465	Document Layout missing data in XML.	Under specific combinations of Document Layout settings, the data was not present in the output.	Fixed
#394051	Assembly Order report.	Added substitution for the report 902 Assembly Order. It is report 12060841 FPL Assembly Order.	Added
