New Features, Enhancements, and Fixes - Lasetnet BC Connector 4.3.1.0

#409479 - Two new fields have been added to the Sales Order, Sales Shipment, and Sales Return order reports

The following two new fields have been added to the **Sales Order**, **Sales Shipment**, and **Sales Return** order reports:

- **BillTo Customer**
- **BillTo CustomerVatNo**

#405021 - New report

A new report has been added to our report list:

- **Production Order Job Card**

#409482 - An error occurs when exporting a configuration from one environment to another

When exporting a configuration from one environment to another (for instance, from test to production), you might use **Document Layout** to add fields or tables to the second environment that do not exist in the original environment.

In previous versions of Lasernet BC Connector, this will cause an error when trying to print.

Lasernet BC Connector 4.3.1.0 enhances this process by skipping fields and tables that do not exist in the original environment.

#409486 – An error occurs when running a report from code without activating the Lasernet Request page

When running a report from code without activating the **Lasernet Request** page, the system produces the following error:

Error

Print Method Option must not be in FPL Print Request No.=0

This is now fixed.

#410730 – Enhancement of the Email template list page

The Email template list page has been enhanced by adding a button that enables the user to preview the email body and subject.

Previous versions:

Lasernet BC Connector 4.3.1.0:

#415602 – Country/Region Code is not translated correctly

In previous versions, the **Country/Region Code** was not translated correctly. The system would use the **Name** of the **Code** and not the actual translation.

This is now fixed.

#415646 – An error occurs in Document Layout

When using an application to synchronize tables across companies and adding or deleting a table within **Document Layout**, the following error occurs:

Error

Record cannot be deleted from the receiver BGTL.

This is now fixed.
