## Enhancements and Fixes - Lasetnet BC Connector 4.3.2.0

#395876 - The nomenclature 'Job' has been changed to 'Project' by Microsoft ® in BC24. Starting from Business Central 24, Microsoft ® has changed the nomenclature 'Job' to 'Project' in several different functions. Therefore, we have updated Lasetnet BC Connector's report names, Placeholders, and Email templates accordingly to reflect this change.

The following are some examples:

- **Project Quote** instead of **Job Quote**

- **PROJECT** and **PROJECTNO** instead of **JOB** and **JOBNO**

Lasernet Placeholder Sets

+ New Manage Refresh Placeholders Actions Automate Fewer options

Set Code ↑	Description	Table No. ▼
JOBQUOTE	Predefined	167
<b>PROJECT</b>	Predefined	167

---

Entries Delete Line Add

Entry Name ↑	Table Name	Field No.	Field Name
{BILLTOCUSTNAME}	Job	58	Bill-to Name
<b>{PROJECTNO}</b>	Job	1	No.

- **Project Quote** and **PROJECTNO** instead of **Job Quote** and **JOBNO**

Email Template

General

Document Type ..... **Project Quote** Description ..... Project Quote (generated)

1	DocNameProdOrderJobCard Copy	"COPY" text
1	DocNameProjectQuote	Project Quote's Document Name
1	Job No.	Job No.
1	Job Task No.	Job Task No.
1	Job Task Type	Job Task Type
1	Project No.	Project No.
1	Project Task No.	Project Task No.

Language Code ↑	Target Text
ENU	Project No.

#412439 - An issue has been addressed regarding the searchability of Lasernet reports. In previous versions, when using the **Search** function, for example, to look for **Production Order - Job card** to print the **Job card** report, only the standard BC report would appear, while the Lasetnet report would be disregarded.

This bug has been fixed for the following reports:

- Prod. Order - Job Card (99000762)
- Whse. - Posted Receipt (7308)
- Whse. - Posted Shipment (7309)
- Whse. - Receipt (7316)
- Whse. - Shipment (7317)

#424923 - When adding a new Filter or Document Layout, Field No. is deactivated by default

In previous versions, when adding a new **Filter** or **Document Layout** to Lasetnet BC Connector, **Field No.** was deactivated by default, which caused unwanted data to be stored in the XML file.

This has been fixed, and **Field No.** is now active by default.

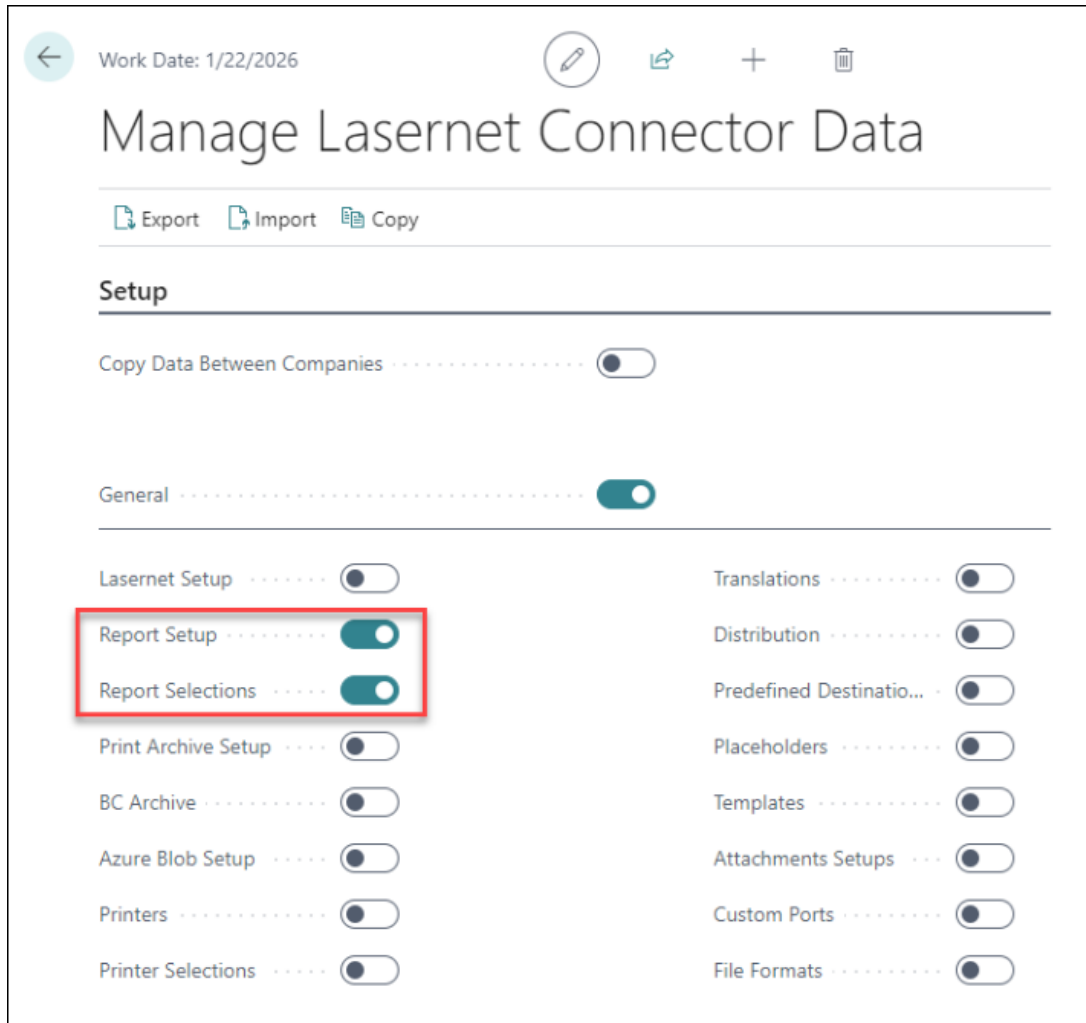

#424925 - ApplicationInsightsConnectionString is obsolete

In previous versions, our telemetry was broken, so a new one had to be created.

Therefore, the updated **ConnectionString** is now included in our code.

#425780 - Report Selection is now automatically activated when Report Setup is selected during an export

As requested by our partners, **Report Selection** is now automatically activated when **Report Setup** is selected during an export (**Export** function).

We have also moved the **Report Selections** option below **Report Setup**.

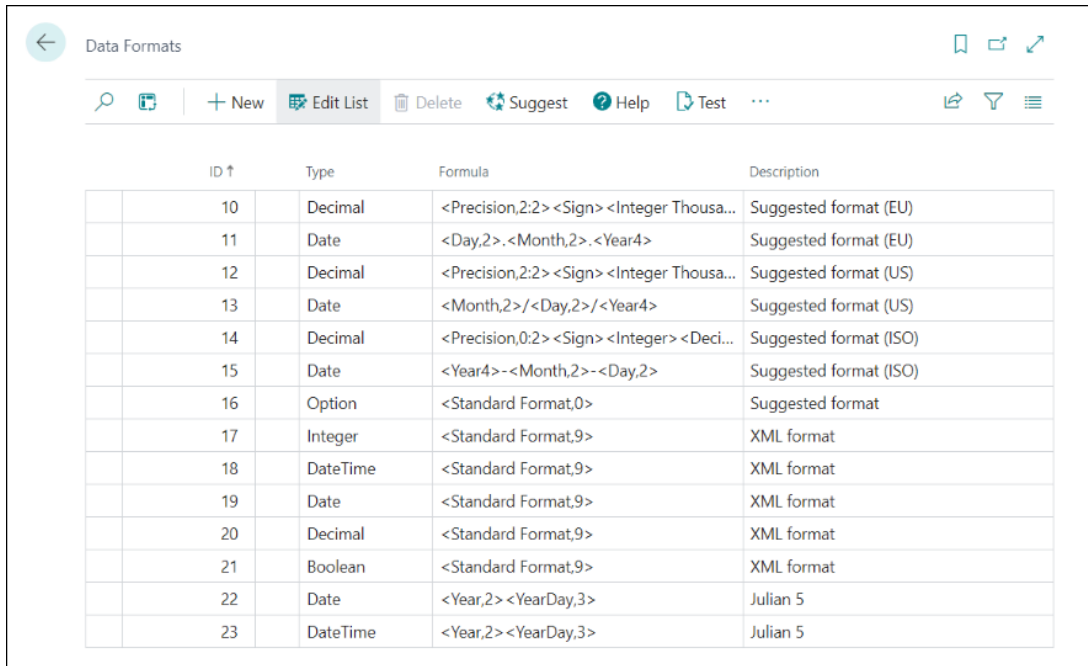

#427106 - Data Formats now supports the Julian calendar format with YearDay function  
**Data Formats** has been enhanced to support dates in the Julian calendar format with a new function called **YearDay**.

For instance, the date 12-06-2024 will be formatted 163, because the 12th of June 2024 is the 163rd day of the year.

#427106 -Several suggested formats have been added to Data Formats

Along with the new functionality **YearDay** for the Julian calendar, other often-used formats

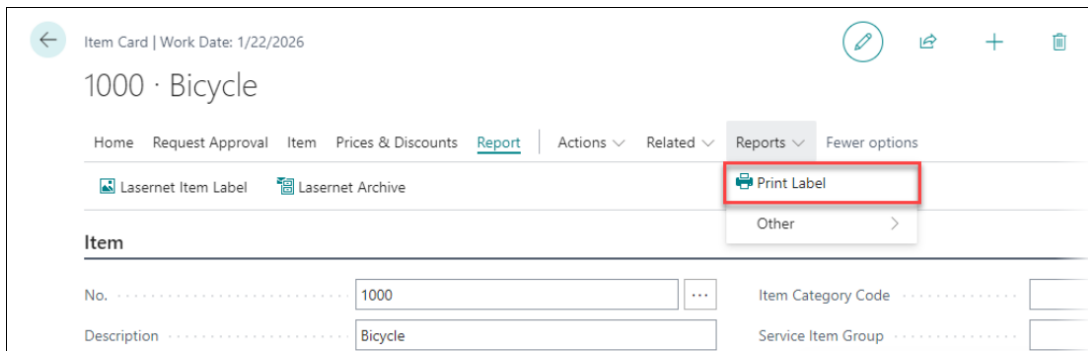

have been added to our suggestion list.

ID ↑	Type	Formula	Description
10	Decimal	<Precision,2:2> <Sign> <Integer Thousa...	Suggested format (EU)
11	Date	<Day,2>.<Month,2>.<Year4>	Suggested format (EU)
12	Decimal	<Precision,2:2> <Sign> <Integer Thousa...	Suggested format (US)
13	Date	<Month,2>/<Day,2>/<Year4>	Suggested format (US)
14	Decimal	<Precision,0:2> <Sign> <Integer> <Deci...	Suggested format (ISO)
15	Date	<Year4>-<Month,2>-<Day,2>	Suggested format (ISO)
16	Option	<Standard Format,0>	Suggested format
17	Integer	<Standard Format,9>	XML format
18	DateTime	<Standard Format,9>	XML format
19	Date	<Standard Format,9>	XML format
20	Decimal	<Standard Format,9>	XML format
21	Boolean	<Standard Format,9>	XML format
22	Date	<Year,2><YearDay,3>	Julian 5
23	DateTime	<Year,2><YearDay,3>	Julian 5

#429543 - Item GTIN Label report can now be substituted with Lasernet Item Label report. Lasetnet BC Connector already included the Item GTIN Label report. Starting from version 23, this report is also included in Microsoft's ® Business Central suite.

Item GTIN Label report can now be substituted with Lasetnet Item Label report when the latter is active.

#431040 - The ApplicationArea property is missing from the controls of the File Formats and Custom Port pages

In previous versions, the **ApplicationArea** property could sometimes be missing from the controls of the **File Formats** and **Custom Port** pages. This prevented the user from adding or deleting new **Custom Ports** or **File Formats**.

Lasetnet Custom Ports
