## Resend with Force Rerun from the Lasetnet Archive for Lasetnet FO Connector 10.0.39 PU63 – Lasetnet Connector Upgrade Required

2024-03-15 - Alice Petruzzella - Comments (0) - Lasetnet FO Connector News

# Lasernet for Dynamics 365

The latest version of Formpipe's Lasetnet Connector - 6.20 - has been released for Dynamics 365 for Finance and Operations versions 10.0.37 (PU61), 10.0.38 (PU62), and 10.0.39 (PU63).

However, when users upgrade to Finance and Operations 10.0.39 (PU63), they might encounter an error such as the following during a few different processes:

### Error

A container for table (CustPackingSlipJour) was packed with more fields than are currently defined on the table and cannot be safely unpacked. The container will need to be recreated with the new table metadata in order to be unpacked correctly.

One of the processes that will trigger the error is using the **Resend with force rerun** function from the **Lasetnet Archive**. This will affect archive records that use a table whose structure has changed in 10.0.39 PU63 and created prior to version 6.20.

To resolve this error, install Lasetnet FO Connector 6.20. Using the **Resend** function for reports printed in Lasetnet FO Connector 6.20 and later will work as expected.

How to ensure Resend with force rerun continues to work for all records

To prevent the error during this process, we recommend installing Lasetnet FO Connector 6.20 and running the **Optimize Lasetnet Log** job before upgrading to Dynamics 365 Finance and Operations 10.0.39 PU63.

In Lasetnet FO Connector 6.20, the **Optimize Lasetnet log** function **MINIMIZE RE-PROCESSING DATA** has undergone some changes to ensure records are saved in a way that allows the use of **Resend with force rerun** even if the structure of the tables changes over time.

What happens if Lasernet FO Connector 6.20 is installed after the upgrade to Dynamics 365 FO 10.0.39 (PU63)

If Lasernet FO Connector 6.20 is installed after upgrading to 10.0.39 PU63 and **Resend with force rerun** is used from the **Lasernet Archive** on an affected record, the **Resend data size** field will display the message "Error." A prompt will provide information on the affected record, and the user will have the choice to remove the **Force rerun** option from the affected records.

For more information about this error, other affected processes, and instructions, refer to [this section](#) of the release notes.
